CS 110

Computer Architecture

Datapath

Instructors:

Chundong Wang, Siting Liu & Yuan Xiao

Course website: <https://toast->

[lab.sist.shanghaitech.edu.cn/courses/CS110@ShanghaiTech/Spring-2025/index.html](https://toast-lab.sist.shanghaitech.edu.cn/courses/CS110@ShanghaiTech/Spring-2025/index.html)

School of Information Science and Technology (SIST)

ShanghaiTech University

2024/3/25

Administratives

- Lab 5 available, please prepare in advance, to check this week!
Lab 6 released!
- HW 3 available, ddl April 1st, start early!
- Proj 1.1 ddl TODAY, Mar. 27th!
- Proj 1.2 will be released.
- Discussion this week on digital circuits.

Mid-term I

- Midterm I
 - April 10th 8:00 am - 10:00 am
 - We start sharp at 8:00 am!
 - Arrive 7:45 am to check-in (Venue: TBD on your egate system; Seat: TBD on-site)
 - Arrive later than 8:30 am will get 0 mark.
- Contents:
 - Everything till April 8th lecture
- Switch cell phones **off!!!** (not silent mode)
 - Put them in your bags.
- Bags in the front. On the table: nothing but pen, exam paper, 1 drink, 1 snack, **your student ID card** and **your cheat sheet!**

Mid-term I requirements

- You can bring a cheatsheet (**handwritten only**). **1**-page **A4**, **double-sided** (2-page for the mid-term II and 3-page for the final). Put it on your desk at exam. Cheatsheet that does not apply to the rules would be taken away.
- [Greencard](#) shown on the course website is provided with the exam paper.
- No other electronic devices are allowed!
 - No ear plugs, music, smartwatch, calculator, computer...
- Anybody touching any electronic device will **FAIL** the course!
- Anybody found cheating (copy your neighbors answers, additional material, ...) will **FAIL** the course!

COMPUTER ORGANIZATION AND DESIGN

THE HARDWARE/SOFTWARE INTERFACE

 **RISC** EDITION

MK
MORGAN KAUFMANN

DAVID A. PATTERSON
JOHN L. HENNESSY

Cheat Sheet

- 1 A4 Cheat Sheet allowed (double sided)
 - Midterm II: 2 pages
 - Final: 3 pages
- Rules:
 - Hand-written – not printed/photocopied!
 - Your name in pinyin on the top!
 - Cheat Sheets not complying to this rule will be confiscated!

Old School Machine Structures

When C program starts

- C executable code is loaded into memory by OS (copying system)
- OS set up stack, then calls into main function
- Run time task initialises memory and other libraries
- Then will go to procedure named main()

Valid Pointer Arithmetic

- Add an integer to a pointer
- Subtract 2 pointers (on the same array)
- Compare two pointers (e.g., `if (p == q)`)
- Compare pointer to null
- Add two pointers / multiply

Six Fundamental Steps in Calling a Function

1. Put parameters in a place where function can access them
2. Transfer control to function
3. Acquire (local) storage resources needed for function
4. Perform desired task of the function
5. Put result value in a place where calling code can access it and restore any registers you used
6. Return control to point of origin, since a function can be called from several points in a program.

New School Machine Structures

- Parallel Requests
- Parallel Threads
- Parallel Data
- Hardware descriptors

6 Great Ideas in Computer Architecture

1. Abstraction
2. Moore's Law
3. Principle of Locality
4. Parallelism
5. Performance Measurement and Improvement
6. Dependability via Redundancy

Two's-Complement Representation

- treats 0 as positive
- 32-bit word represents 2^{32} integers from -2^{31} to $2^{31}-1$

Components of a Computer

Stack

Program's address space / Memory Address

Stack: local variables, needs function, grow downwards

Heap: space requested for dynamic data via malloc, grows dynamically

Static data: variable declared outside functions, loaded into program starts, can be modified

Code: loaded when program starts, cannot change

Register File

Register File: used for instructions with immediate, for and on and branches (big and big)

Opcode: rs rt rd shamt funct

Immediate: 5-bit field only represents number up to 31

Instruction has immediate, can use at most 2 registers

used for (im, on, big, on) branches and with immediate

Decoding with larger immediate

Load Upper Immediate: `lui $t0, 0xABCD`

Store: `sw $t0, 0xABCD($t1)`

Load: `lw $t0, 0xABCD($t1)`

Store: `sw $t0, 0xABCD($t1)`

Load: `lw $t0, 0xABCD($t1)`

Store: `sw $t0, 0xABCD($t1)`

Load: `lw $t0, 0xABCD($t1)`

Store: `sw $t0, 0xABCD($t1)`

Common Memory Problems

- Very uninitialised values
- Using memory that you don't own
- Improper use of free / malloc by messing with the pointer handle returned by malloc / calloc
- Memory leaks

Levels of Representation / Interpretation

- High level language
- Assembly language
- Machine language
- Machine / Interpretation
- Hardware Architecture Description
- Architecture / Implementation
- Logic Level Description

SIFT REFERENCE GUIDE (V.1.1) – CREATING TIMELINES WITH THE SIFT WORKSTATION

1. VISIT: <http://computer-forensics11.sans.org/community/downloads>

2. BOOT SIFT VM

3. ELEVATE PRIVS

4. CONNECT IMAGE TO SIFT

THE PURPOSE OF THIS REFERENCE GUIDE IS TO WALK THROUGH THE PROCESS OF BOOTING THE SIFT WORKSTATION, CREATING A TIMELINE ("SUPER" OR "MICRO") AND REVIEWING IT.

HOW TO CALCULATE THE OFFSET FOR MOUNTING

1. Run mmls to query partition layout
2. Identify partition and byte offset
3. (Partition byte offset) x (bytes per sector) = offset ##### to use!
Example: 63 X 512 = 32256

Note: If needed, repeat for each partition. Make new mount point: # mkdir /mnt/windows_mount2/

log2timeline PARSING PLUGINS

- apache2_error - Apache2 error log file
- chrome - Chrome history file
- encase_dirlisting - CSV file that is exported from encase
- evt - Windows 2k/XP/2k3 Event Log
- evtx - Windows Event Log File (EVTX)
- exif - Metadata information from files using ExifTool
- ff_bookmark - Firefox bookmark file
- firefox2 - Firefox 2 browser history
- firefox3 - Firefox 3 history file
- ftk_dirlisting - CSV file that is exported from FTK Imager (dirlisting)
- generic_linux - Generic Linux logs that start with MMM DD HH:MM:SS
- iehistory - index.dat file containing IE history
- iis - IIS W3C log file
- isatxt - ISA text export log file
- jp_ntfs_change - CSV output file from JP (NTFS Change log)
- mactime - Body file in the mactime format
- mcafee - Log file
- mft - NTFS MFT file
- mssql_errlog - ERRORLOG file produced by MS SQL server
- ntuser - NTUSER.DAT registry file
- opera - Opera's global history file
- oxml - OpenXML document pcap
- pcap - PCAP file
- pdf - Available PDF document metadata
- prefetch - Prefetch directory
- recycler - Recycle bin directory
- restore 0.9 - Restore point directory
- safari - Safari History.plist file
- sam - SAM registry file
- security - SECURITY registry file
- setupapi - SetupAPI log file in Windows XP
- skype_sql - Skype database
- software - SOFTWARE registry file
- sol - .sol (LSO) or a Flash cookie file
- squid - Squid access log (http_emulate off)
- syslog - Linux Syslog log file
- system - SYSTEM registry file
- tlm - Body file in the TLN format
- volatility - Volatility output files (pscan2, sockscan2, ...)
- win_link - Windows shortcut file (or a link file)
- wmiprov - WMI log file
- xpfirewall - XP Firewall log

KEY

- Red text – image/source
- Blue text – mount point
- Purple text – output file
- Green text – log2timeline plugins
- Brown text - Timezone

5. HARD DRIVE MOUNTING (if you are using log2timeline-sift and Single DD you can skip to 7-A)

SINGLE OR SPLIT IMAGE (2 options):

mount -t ntfs -o ro,loop,show_sys_files,streams_interface=windows,offset=#### image.E01 /mnt/ewf/

mount -t ntfs -o ro,loop,show_sys_files,streams_interface=windows,offset=#### image.E01 /mnt/ewf/

SINGLE IMAGE

mount -t ntfs -o ro,loop,show_sys_files,streams_interface=windows,offset=#### image.dd /mnt/windows_mount/

SPLIT IMAGE (2 step process)

affuse image.001 /mnt/aff

mount -t ntfs-3g -o loop,ro,show_sys_files,streams_interface=windows,offset=#### image.001 /mnt/windows_mount/

7-A: AUTOMATED SUPER TIMELINE CREATION

log2timeline-sift -o -z [TIMEZONE] -p [PARTITION #] -i [IMAGE FILE]

DISK IMAGE (prompt for partition, mount, and run):

XP # log2timeline-sift -z EST5EDT -i image

WIN7 # log2timeline-sift -win7 -z EST5EDT -i image

FOR PARTITION (mount and run using all applicable plugins):

XP # log2timeline-sift -z EST5EDT -p 0 -i partition

WIN7 # log2timeline-sift -win7 -z EST5EDT -i partition

OTHER USAGE EXAMPLES:

Display list of available plugins:
log2timeline -f list
Run log2timeline using only specific plugins:
log2timeline-sift -z EST5EDT -i image.dd
Help (man page):
log2timeline -h

8. CSV FILE OUTPUT (/cases/timeline-output-folder)

-date: The date of the event, in the format of MM/DD/YYYY
-time: The time of day, expressed in a 24h format, HH:MM:SS
-timezone: The timezone that was used to call the tool with.
-source: MACB meaning of the fields, comp w/ mactime format.
-sourcetype: Desc of the source ("Internet Explorer" instead of WEBHIST)
-type: Timestamp type (i.e. "Last Accessed", "Last Written")
-user: Username associated with the entry, if one is available.
-host: Hostname associated with the entry, if one is available.
-short: Contains less text than the full description field.
-desc: where majority info is stored, the actual parsed desc of the entry.
-version: Version number of the timestamp object.
-filename: Filename with the full path that contained the entry
-inode: inode number of the file being parsed.
-notes: Some input modules insert additional information in the form of a note, which comes here. Or it can be used during the review.
-format: Input module name used to parse the file.
-extra: Additional information parsed is joined together and put here.

7-B: MANUAL "MICRO" TIMELINE CREATION

log2timeline-sift -o -z [TIMEZONE] -p [PARTITION #] -i [IMAGE FILE] -f [FORMAT] [-z TIMEZONE] [-o OUTPUT MODULE] [-w LOG_FILE/LOG_DIR [-] [FORMAT FILE OPTIONS]]

EXTRACT METADATA (using log2timeline or fls)

Extract system data w/ log2timeline from mounted file system:

log2timeline -f mft -o mactime -r -z EST5EDT -w mft.body /mnt/volume/

OR Extract MFT using Sleuthkit:

fls -m "" -o offset -i image.dd > fls.body

Convert body file format to mactime:

mactime -b fls.body -d > log2timeline.csv

ARTIFACTS (run l2l on mounted file system with plugins recursively)

Extract artifacts w/ log2timeline and run on mounted file system:

log2timeline -f firefox3,chrome -o mactime -r -z EST5EDT -w web.body /mnt/volume/

Convert body file format to CSV format w/ mactime:

mactime -b log2timeline.body -d > log2timeline.csv

9. FILTER TIMELINE

Filter timeline with date range to include only:
l2t_process -b timeline.csv MM-DD-YYYY..MM-DD-YYYY > filtered.csv
Filter timeline with keyword list (one term per line in keywords.txt):
l2t_process -b timeline.csv -k keywords.txt > filtered.csv
What sources are in your timeline?
awk -F, '{print \$6;}' timeline.csv | grep -v sourcetype | sort | uniq
Find all LNK files that reference E Drive
grep "Shortcut LNK" timeline.csv | grep "E:"
Find MountPoints2 entries that reference E Drive
grep "MountPoints2 key" timeline.csv | grep "E drive"
grep USB timeline.csv | grep "SetupAPILog"

File System	M	A	C	B
Ext2/3	Modified	Accessed	Changed	N/A
FAT	Written	Accessed	N/A	Created
NTFS	File Modified	Accessed	MFT Modified	Created
UFS	Modified	Accessed	Changed	N/A

7-A & 7-B

HELP? OPTIONS? USAGE?

log2timeline -help
Log2timeline-sift -help
L2t_process -help

OTHER log2timeline

OUTPUT FORMATS

Note: CSV is Default Output
-BeeDocs - Mac OS X visualization tool
-CEF - Common Event Format - ArcSight
-CFTL - XML file- CyberForensics TimeLab visualization tool
-CSV - comma separated value file
-Mactime - Both older and newer version of the format supported for use by TSK's mactime
-SIMILE - XML file - SIMILE timeline visualization widget
-SQLite - SQLite database
-TLN - Tab Delimited File
-TLN - Format used by some of H Carvey tools, expressed as a ASCII output
-TLNX - Format used by some of H Carvey tools, expressed as a XML document

10. CONNECT TO SIFT

- 1. SIFT Desktop > SETTINGS -> OPTIONS -> Shared Folders -> Always Enabled (Check)
- 2. SIFT Desktop > VMware-Shared-Drive
- Access from a Win Machine
\\SIFTWORKSTATION

11. REVIEW TIMELINE

- Review timelines using:
- Open, Soft, Filter with Excel
- Import into SPLUNK
- SIMILE
- Tapestry

Outline

- Useful building blocks
 - ALU design
 - Register file
 - Memory considerations
- Datapath
- Design of the controller

Warm-up

- A classic problem: sequence detection for “010” (non-overlapping)

Input: 0 1 0 0 1 0 1 0 1 1 0
Output: 0 0 0 **1** 0 0 **1** 0 0 0 0

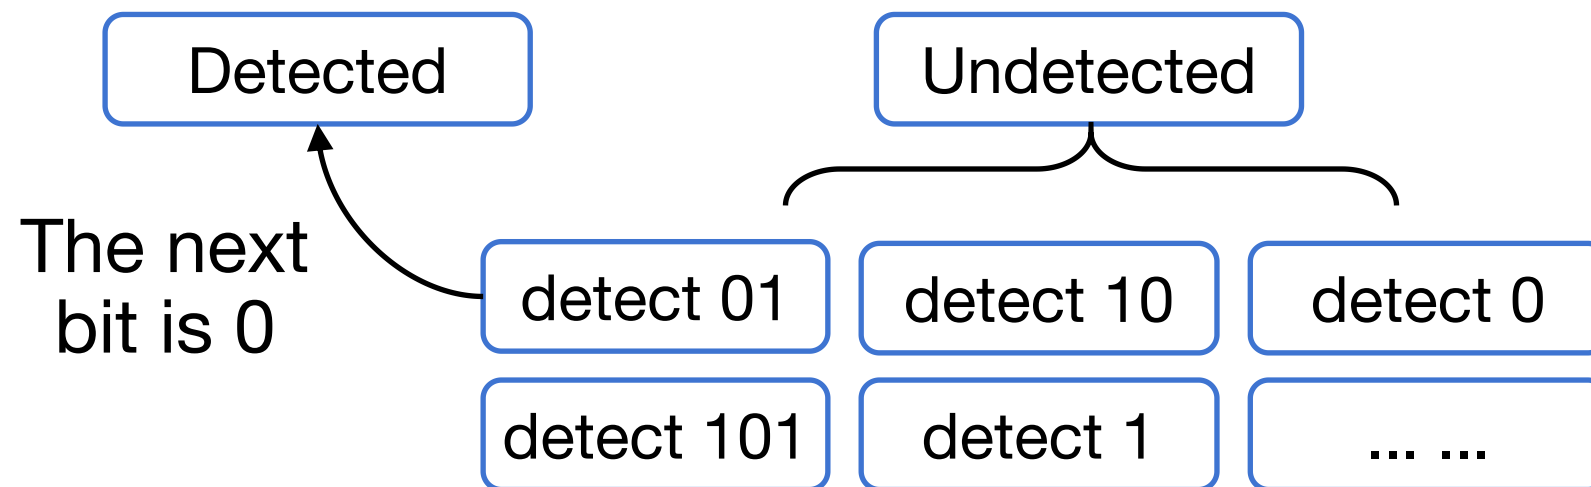

- Step 1: Draw finite state machine of the desired function (we ignore the initialization)
- Step 2: Define/assign binary numbers to represent the states, the inputs and the outputs
- Step 3: Write down the truth table (enumerate input/previous state (and current state) and their corresponding current state (and output))
- Step 4: Use template and decide the combinational block for state transition and output logic

Warm-up

- A classic problem: sequence detection for “010” (non-overlapping)

Input: 0 1 0 0 1 0 1 0 1 1 0
Output: 0 0 0 **1** 0 0 **1** 0 0 0 0

- Step 1: Draw finite state machine of the desired function

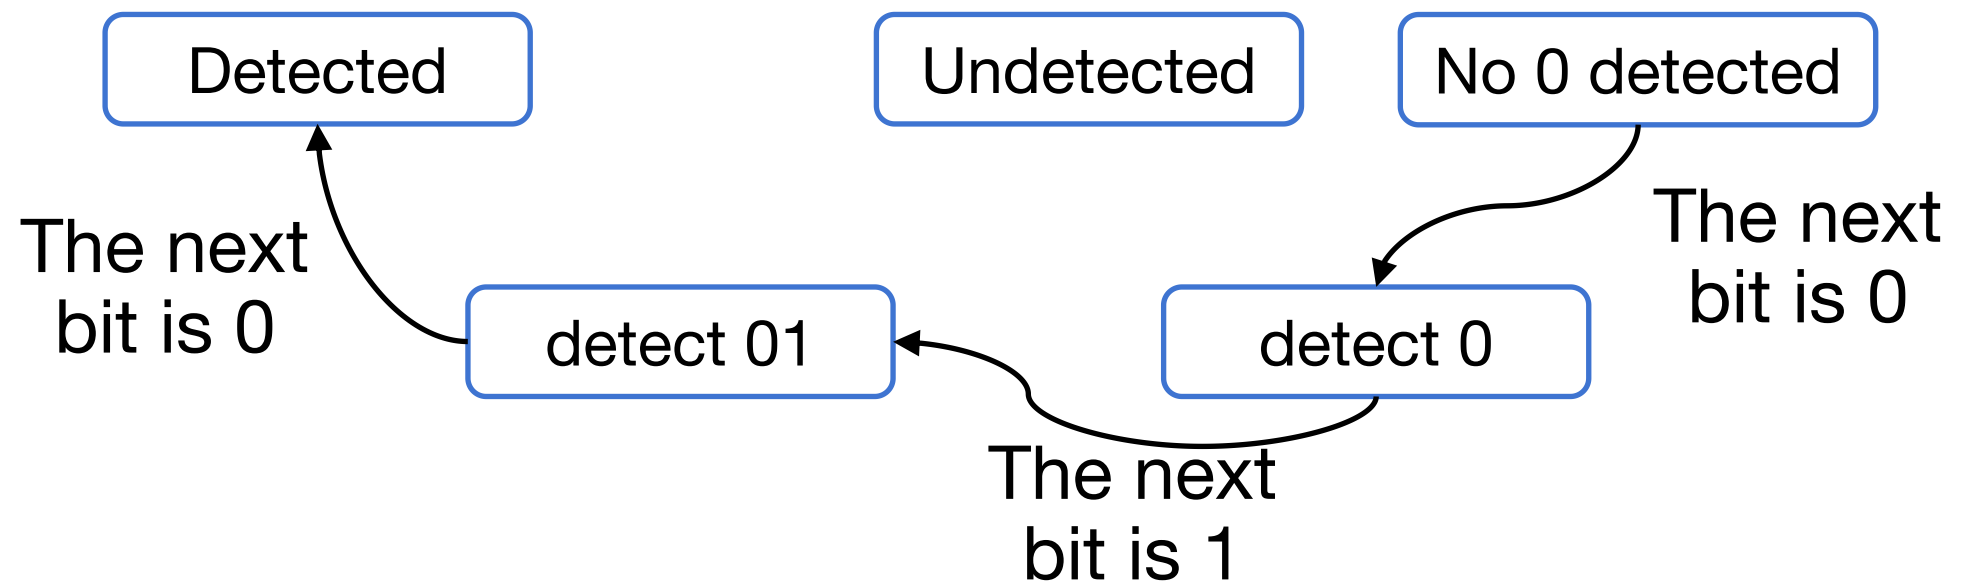

Warm-up

- A classic problem: sequence detection for “010” (non-overlapping)

Input: 0 1 0 0 1 0 1 0 1 1 0
Output: 0 0 0 **1** 0 0 **1** 0 0 0 0

- Step 1: Draw finite state machine of the desired function

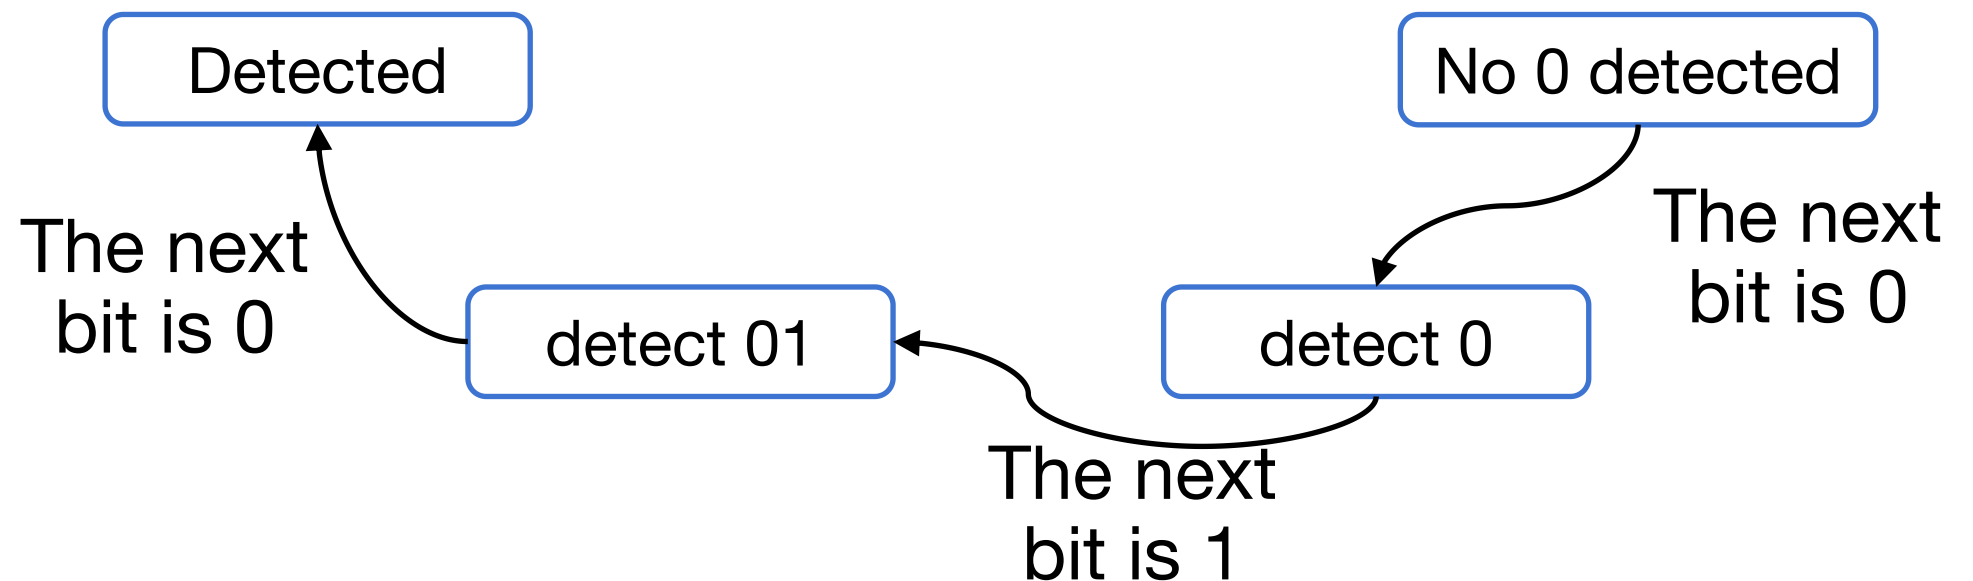

Warm-up

- A classic problem: sequence detection for “010” (non-overlapping)

Input: 0 1 0 0 1 0 1 0 1 1 0
Output: 0 0 0 **1** 0 0 **1** 0 0 0 0

- Step 1: Draw finite state machine of the desired function

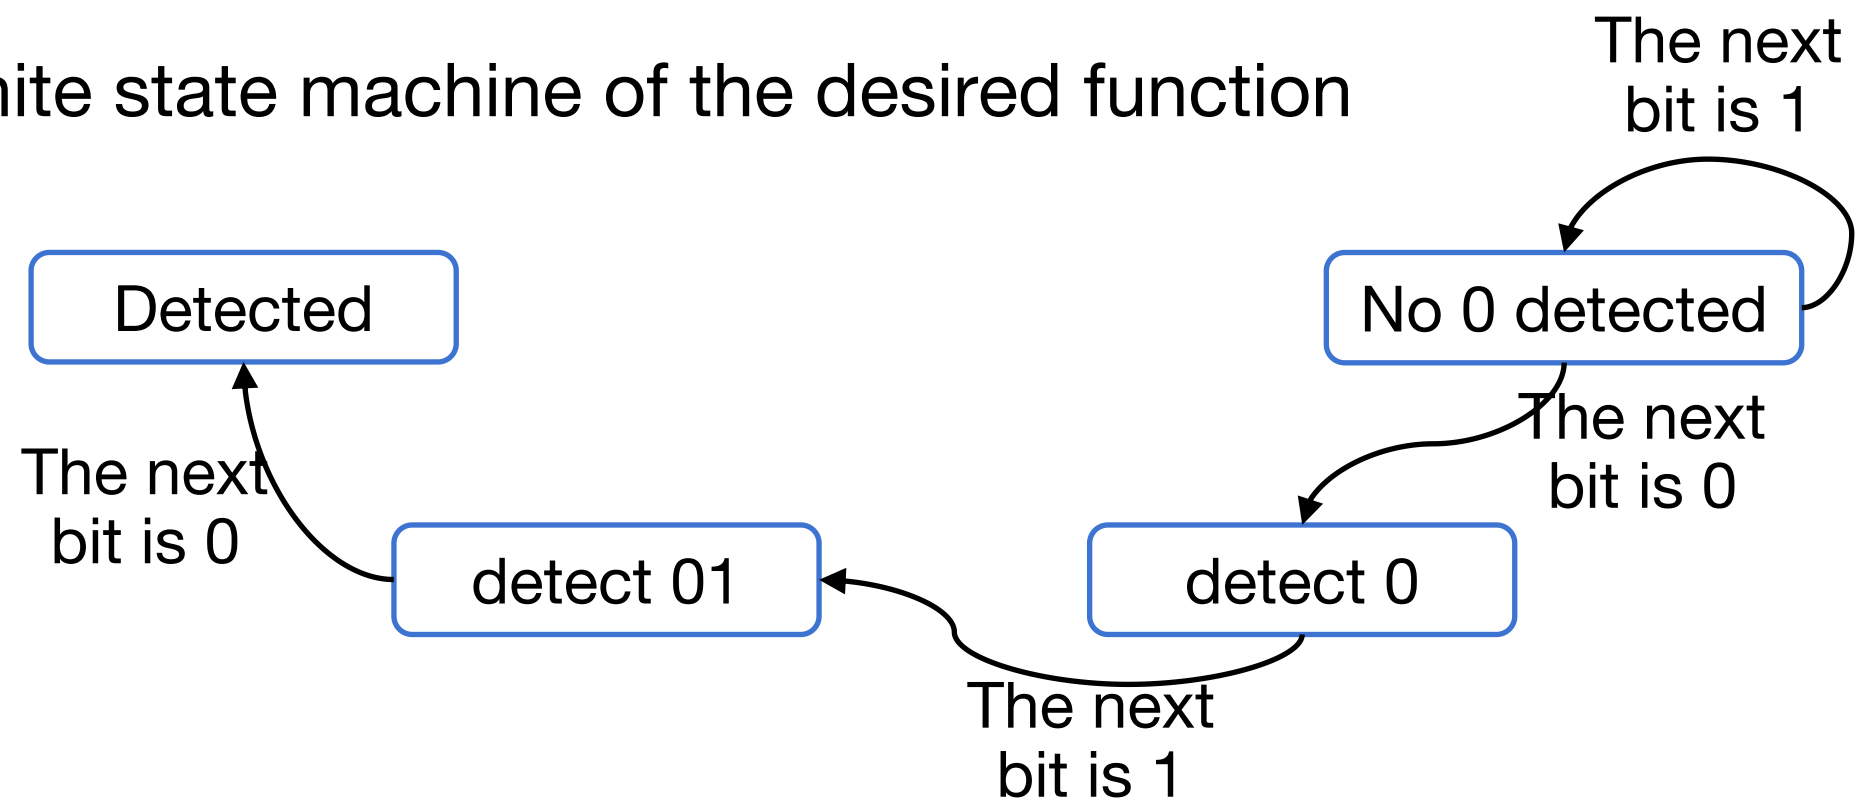

Warm-up

- A classic problem: sequence detection for “010” (non-overlapping)

Input: 0 1 0 0 1 0 1 0 1 1 0
Output: 0 0 0 **1** 0 0 **1** 0 0 0 0

- Step 1: Draw finite state machine of the desired function

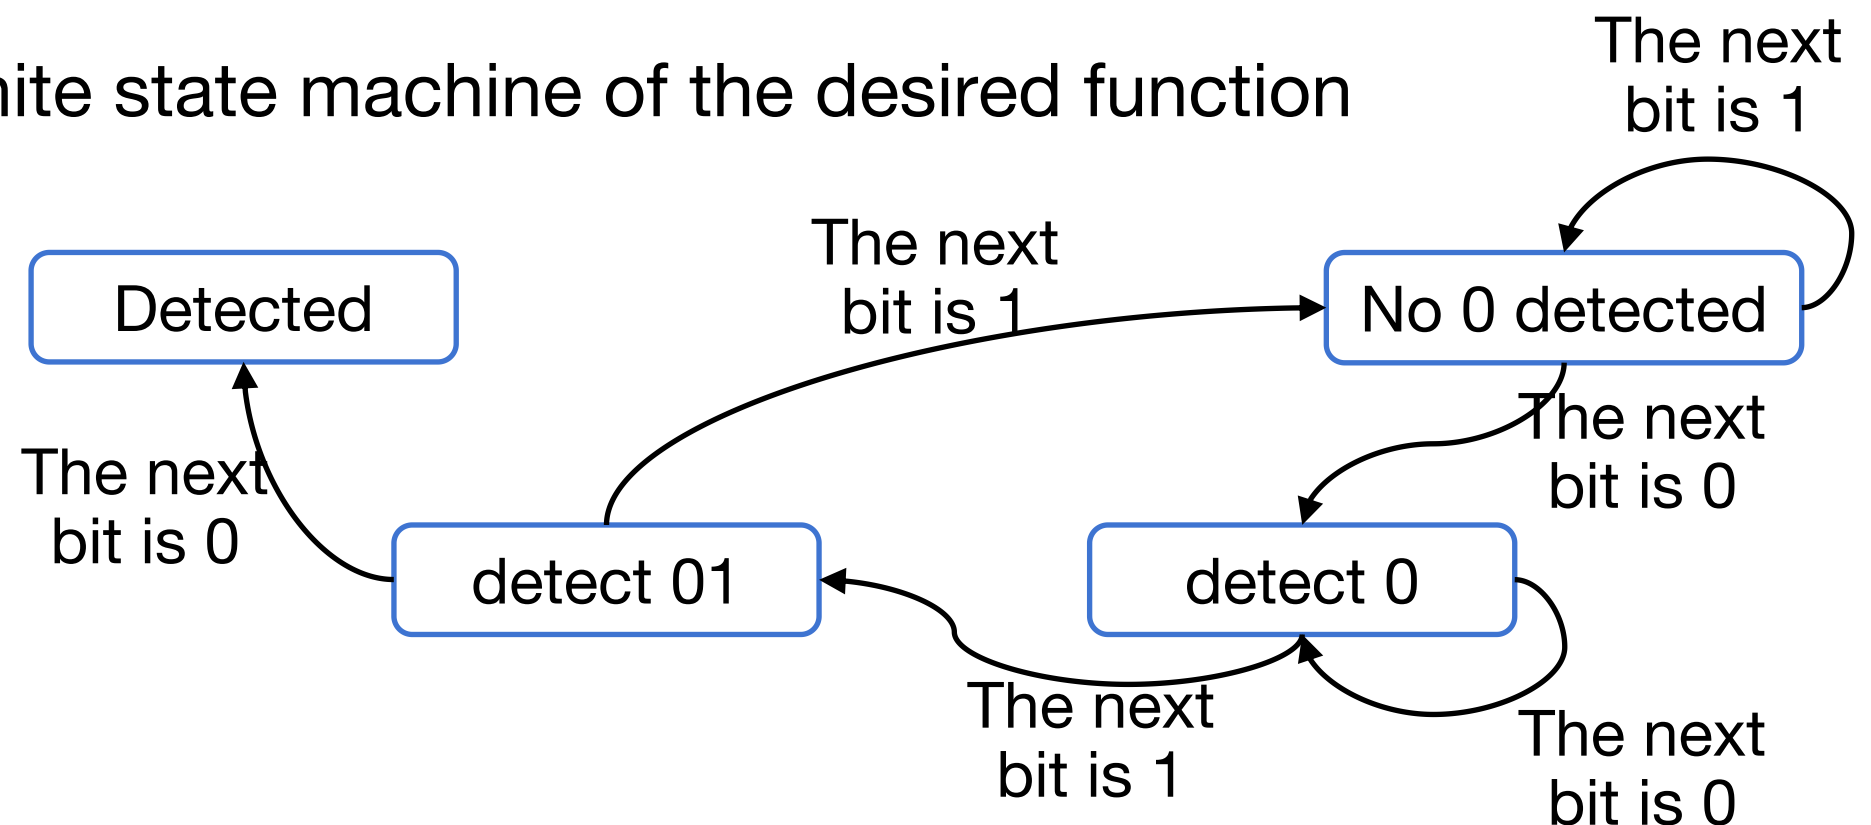

Warm-up

- A classic problem: sequence detection for “010” (non-overlapping)

Input: 0 1 0 0 1 0 1 0 1 1 0
Output: 0 0 0 **1** 0 0 **1** 0 0 0 0

- Step 1: Draw finite state machine of the desired function

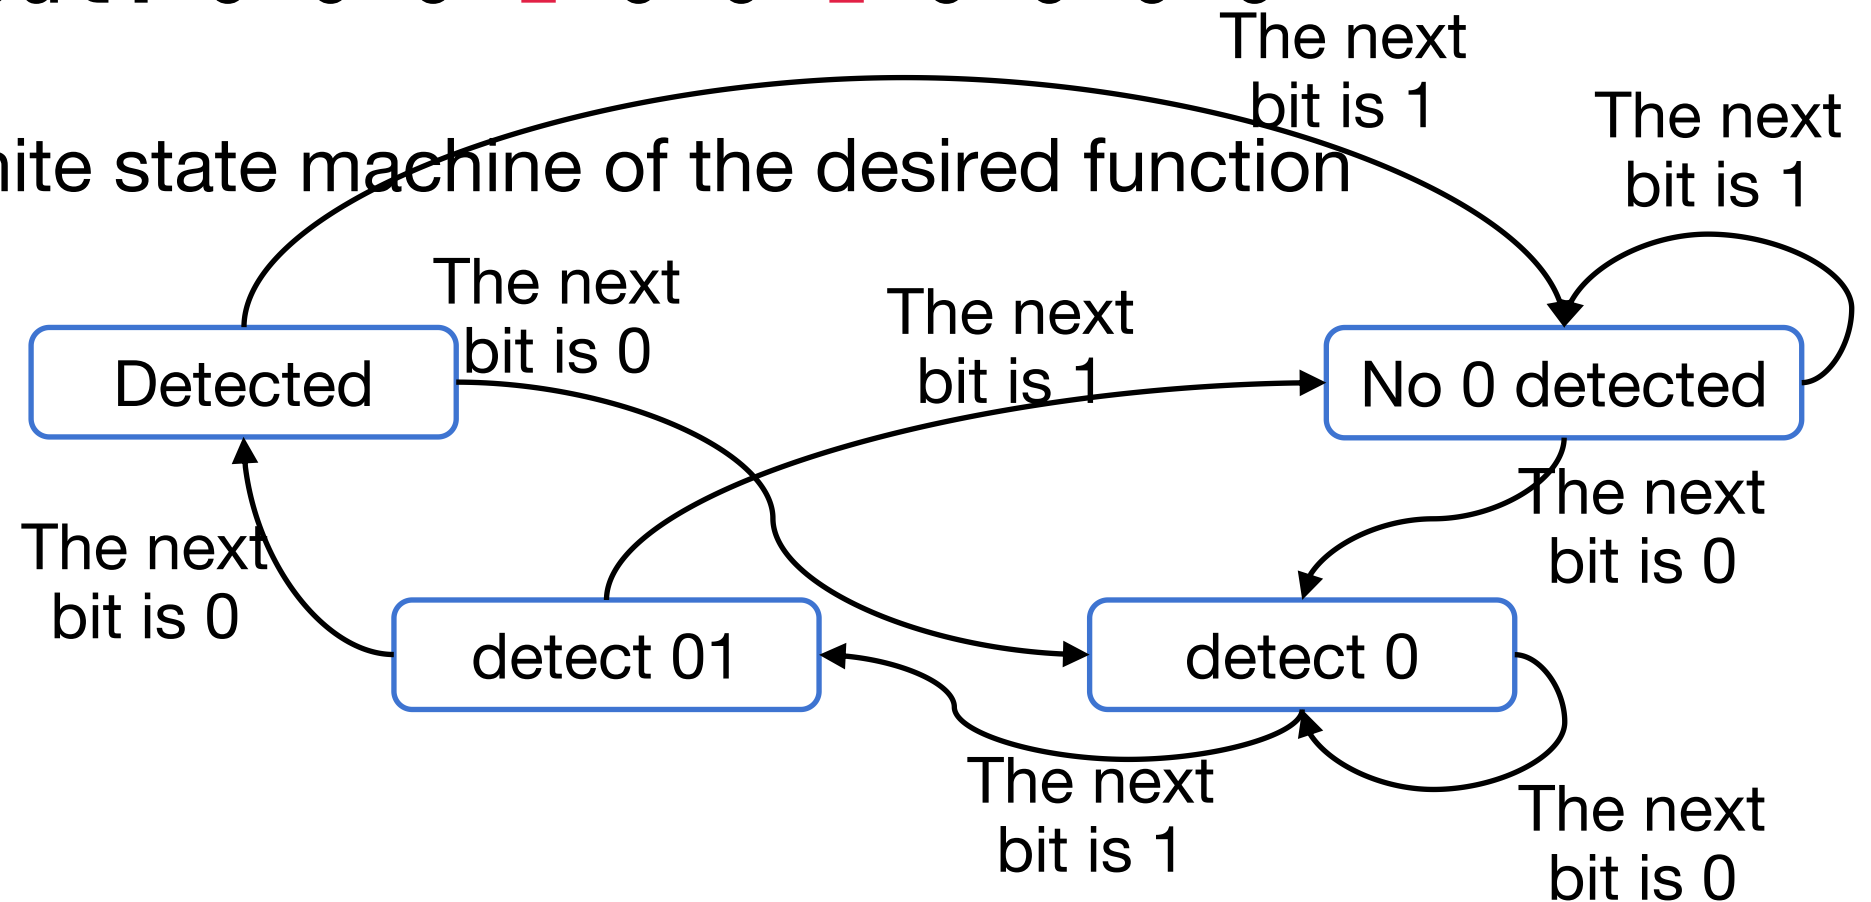

Warm-up

- A classic problem: sequence detection for “010” (non-overlapping)

Input: 0 1 0 0 1 0 1 0 1 1 0

Output: 0 0 0 **1** 0 0 **1** 0 0 0 0

- Step 1: Draw finite state machine of the desired function

Warm-up

- A classic problem: sequence detection for “010” (non-overlapping)

Input: 0 1 0 0 1 0 1 0 1 1 0
Output: 0 0 0 **1** 0 0 **1** 0 0 0 0

- Step 1: Draw finite state machine of the desired function

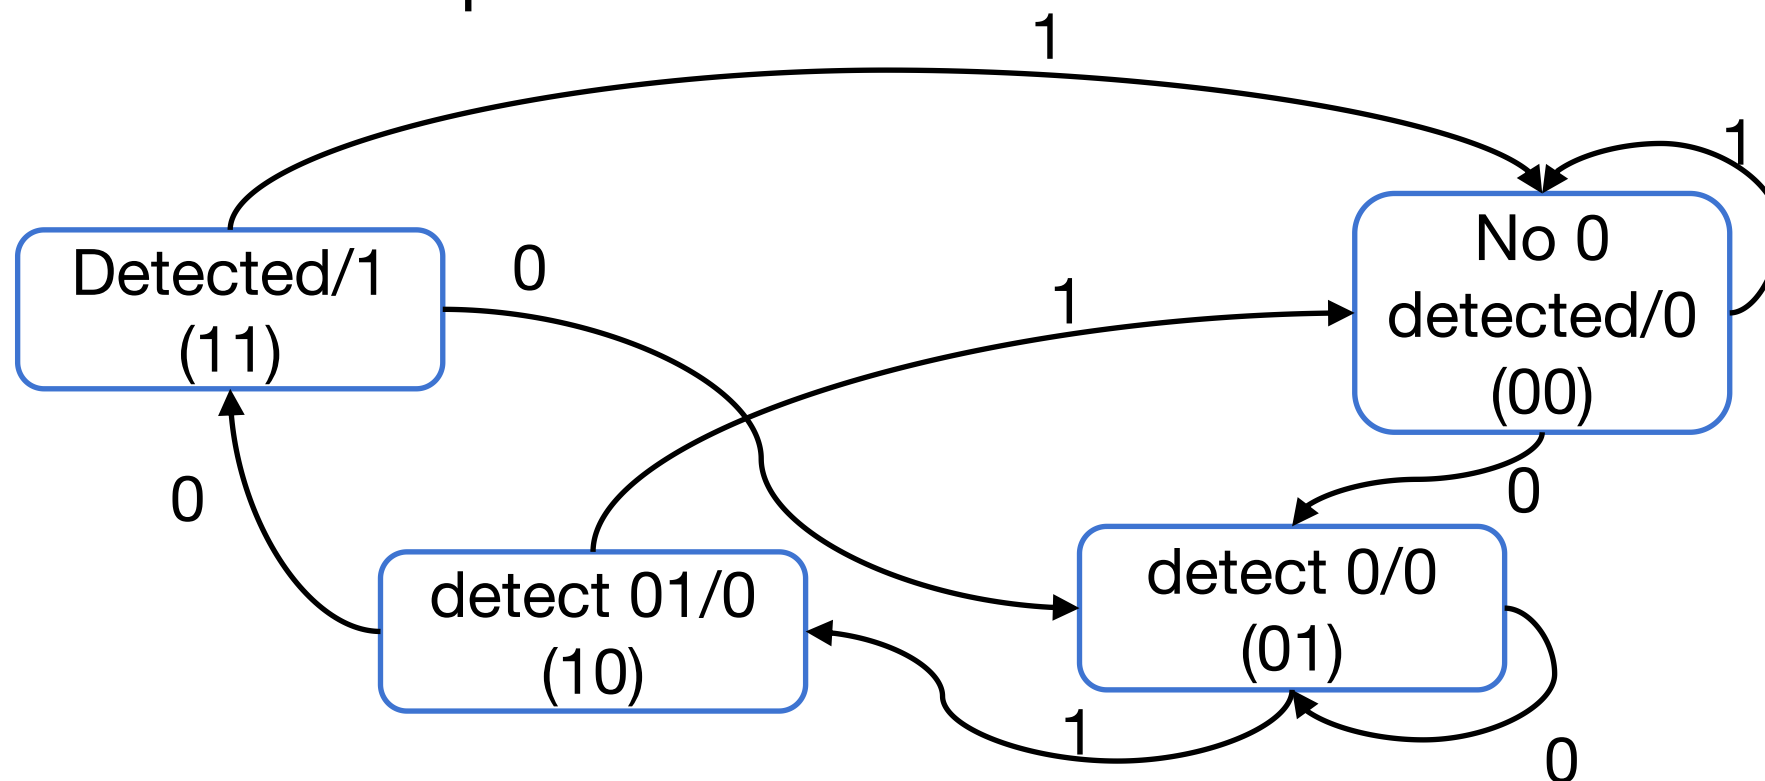

Warm-up

- A classic problem: sequence detection for “010” (non-overlapping)

Input: 0 1 0 0 1 0 1 0 1 1 0

Output: 0 0 0 **1** 0 0 **1** 0 0 0 0

- Step 2: Define/assign binary numbers to represent the states, the inputs and the outputs

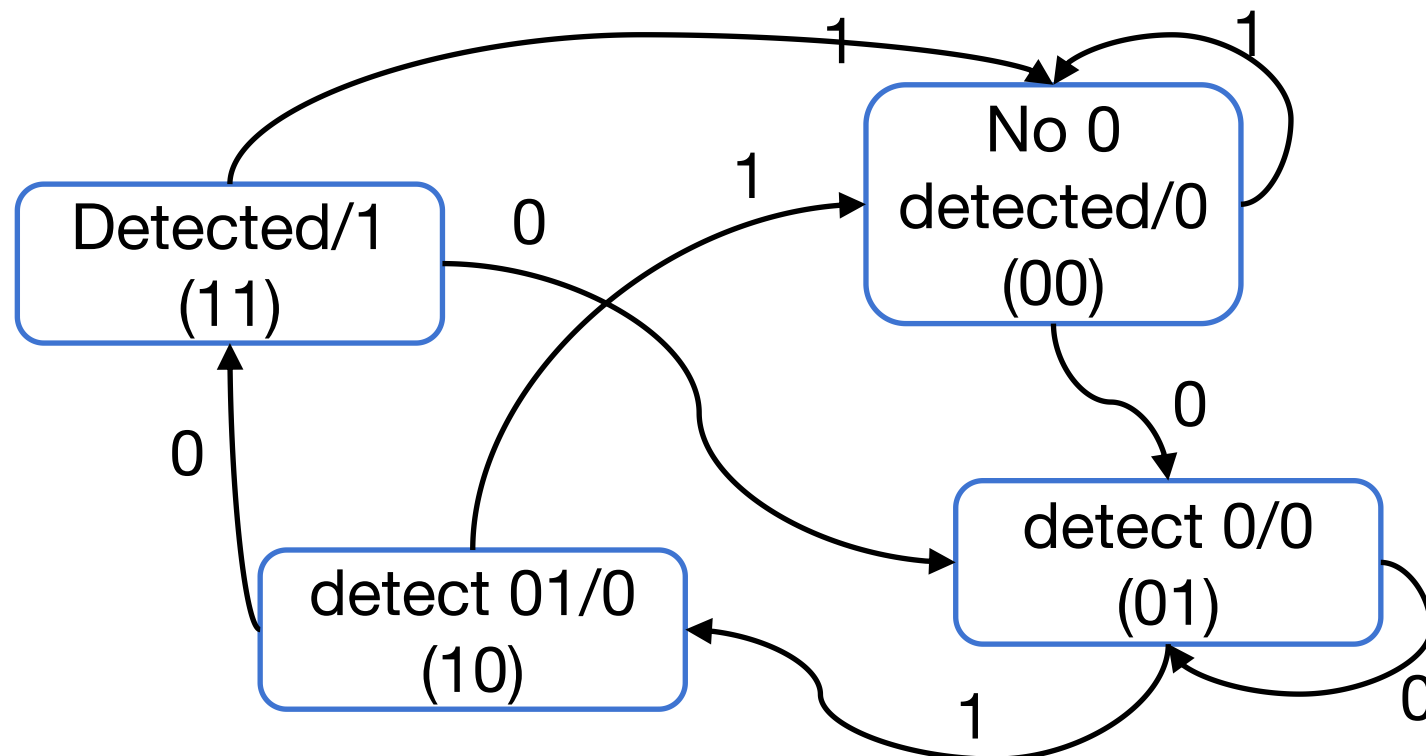

Warm-up

- A classic problem: sequence detection for “010” (non-overlapping)

Input: 0 1 0 0 1 0 1 0 1 1 0

Output: 0 0 0 **1** 0 0 **1** 0 0 0 0

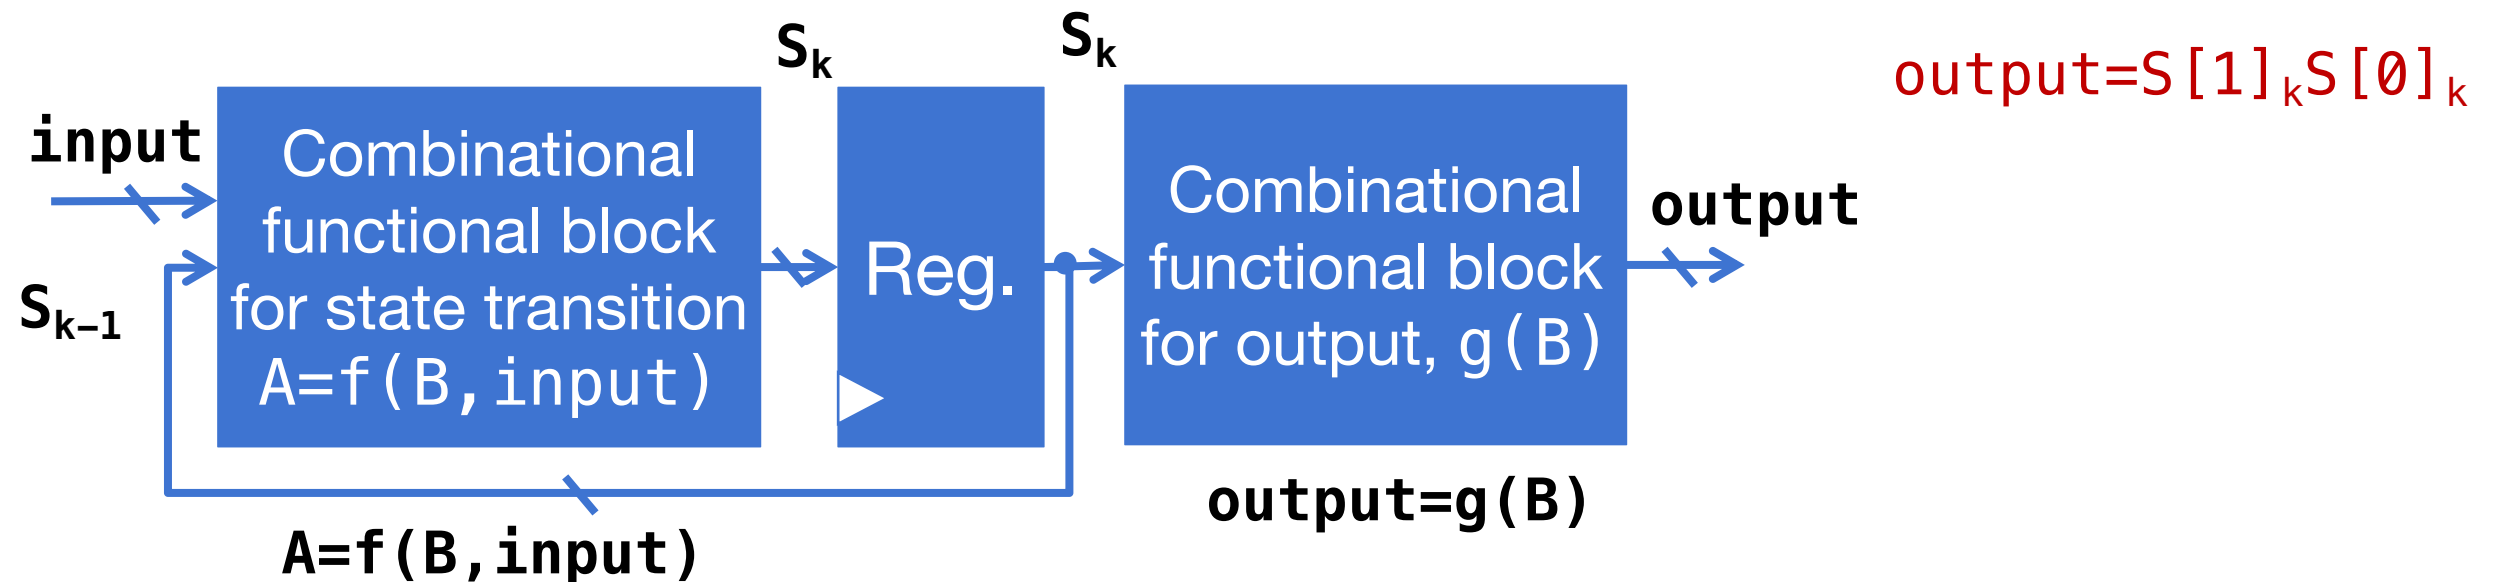

- Step 3: Write down the truth table (enumerate input/previous state (and current state) and their corresponding current state (and output))

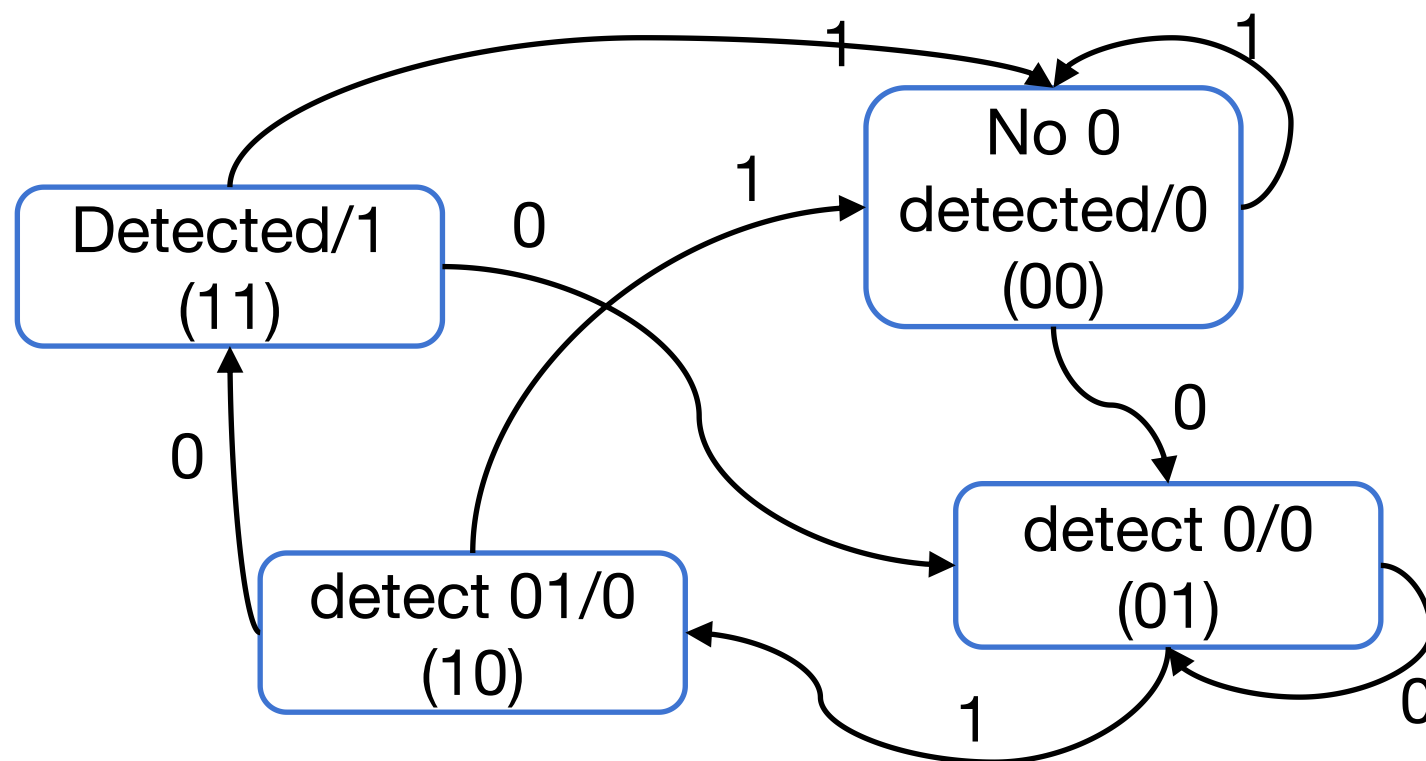

Previous state Current state

input	S[1] k-1	S[0] k-1	S[1] k	S[0] k	output
0	0	0	0	1	0
0	0	1	0	1	0
0	1	0	1	1	1
0	1	1	0	1	0
1	0	0	0	0	0
1	0	1	1	0	0
1	1	0	0	0	0
1	1	1	0	0	0

Warm-up

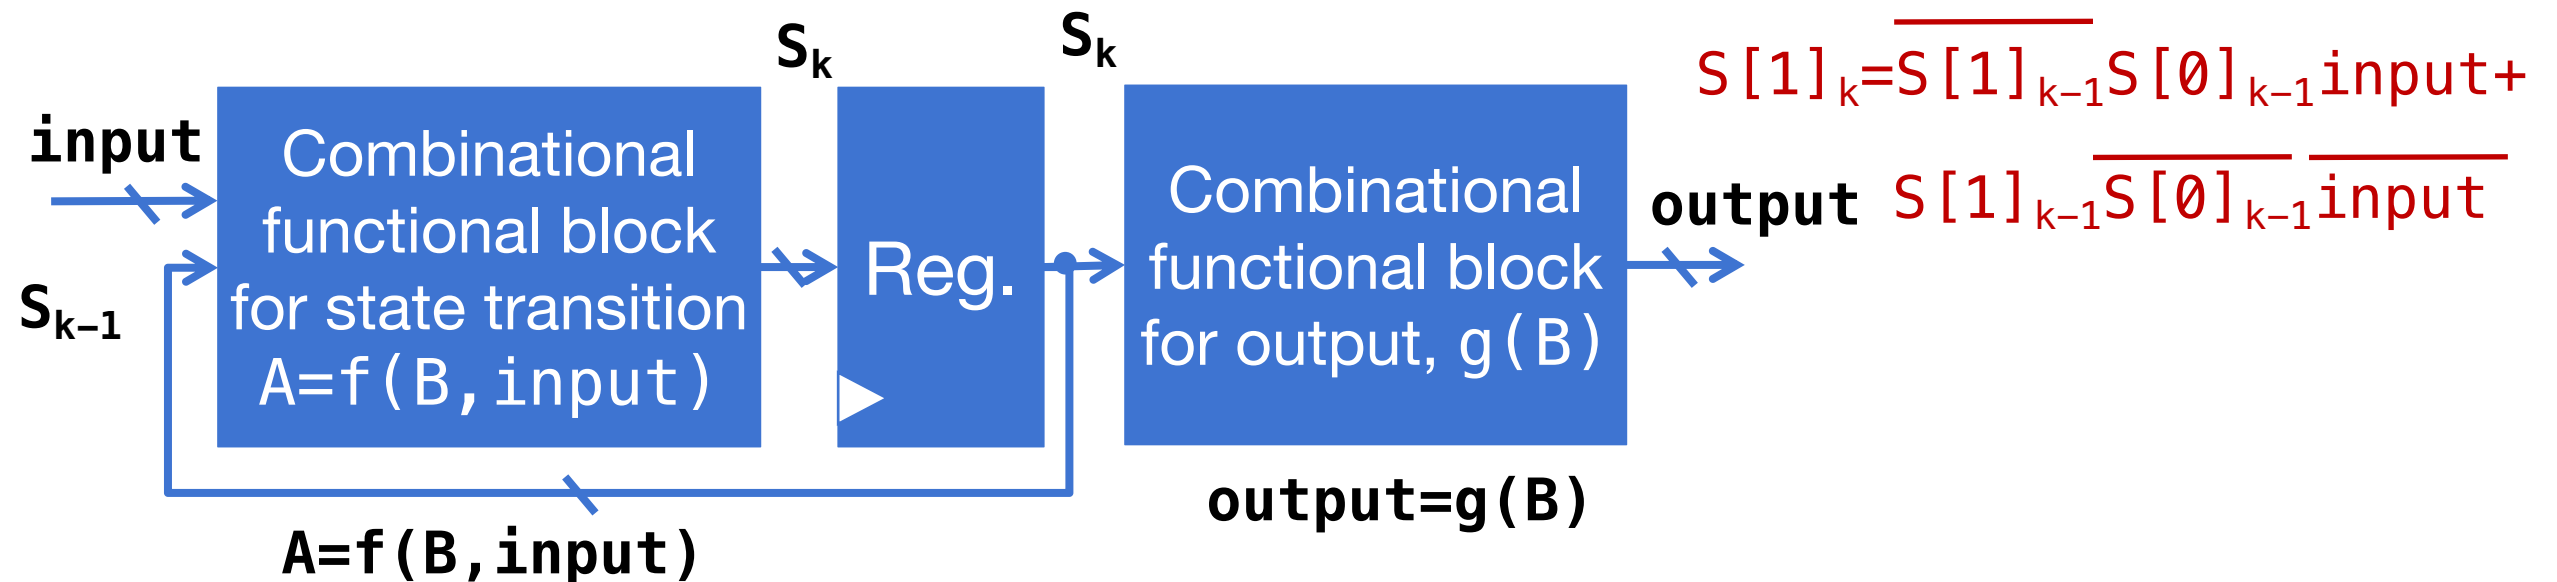

- Step 4: Use template and decide the combinational block for state transition and output logic

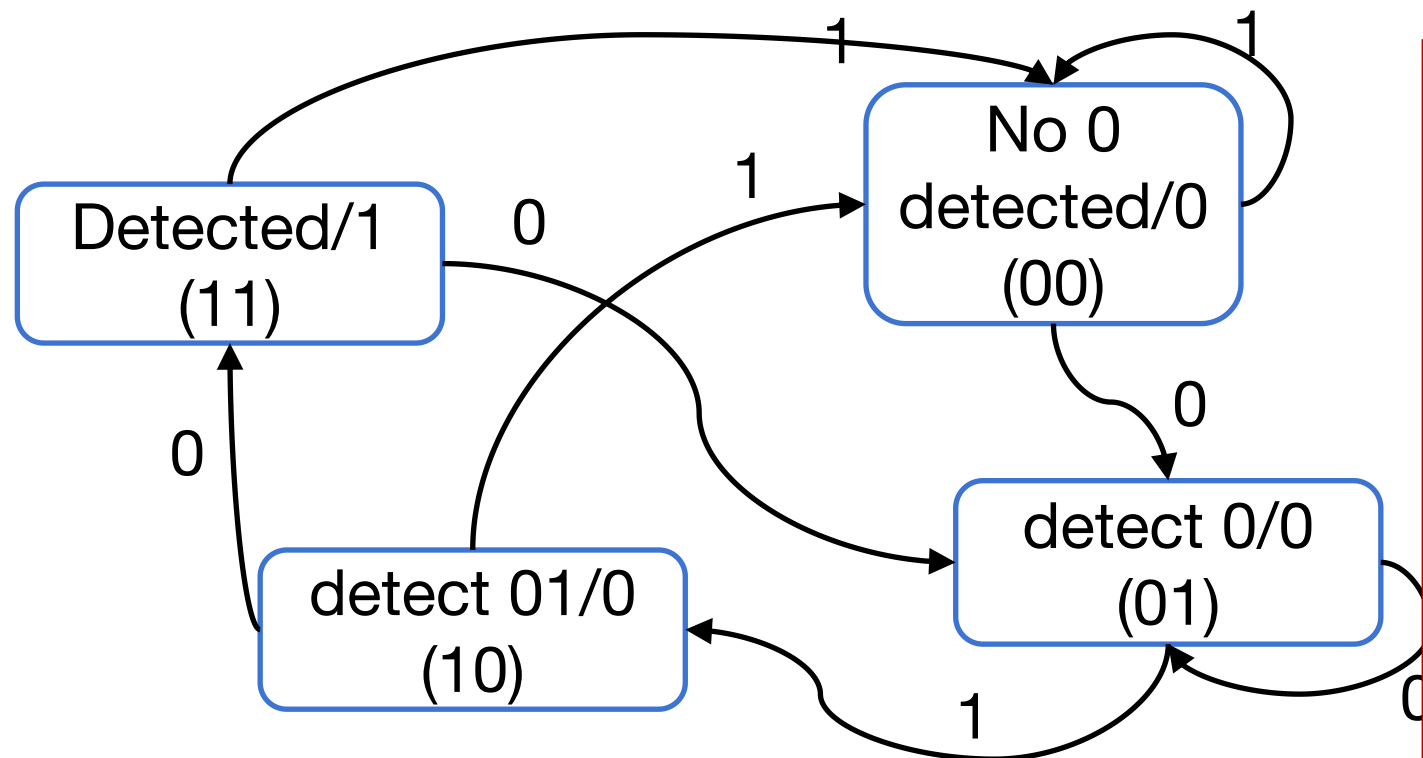

Previous state			Current state		
input	$S[1]_{k-1}$	$S[0]_{k-1}$	$S[1]_k$	$S[0]_k$	output
0	0	0	0	1	0
0	0	1	0	1	0
0	1	0	1	1	1
0	1	1	0	1	0
1	0	0	0	0	0
1	0	1	1	0	0
1	1	0	0	0	0
1	1	1	0	0	0

Warm-up

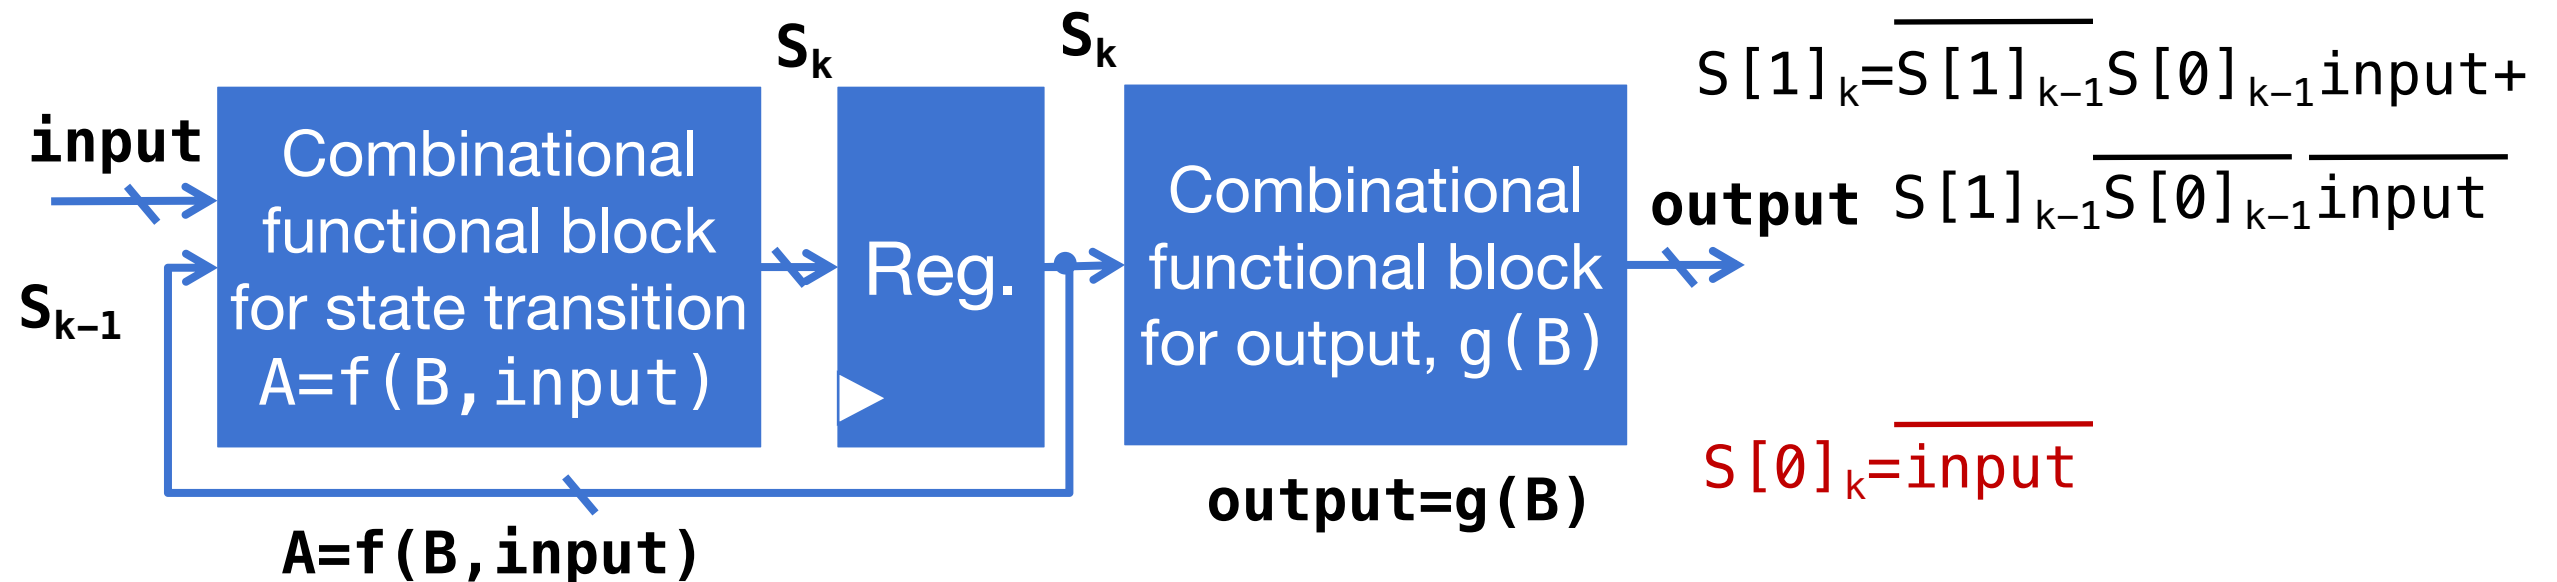

- Step 4: Use template and decide the combinational block for state transition and output logic

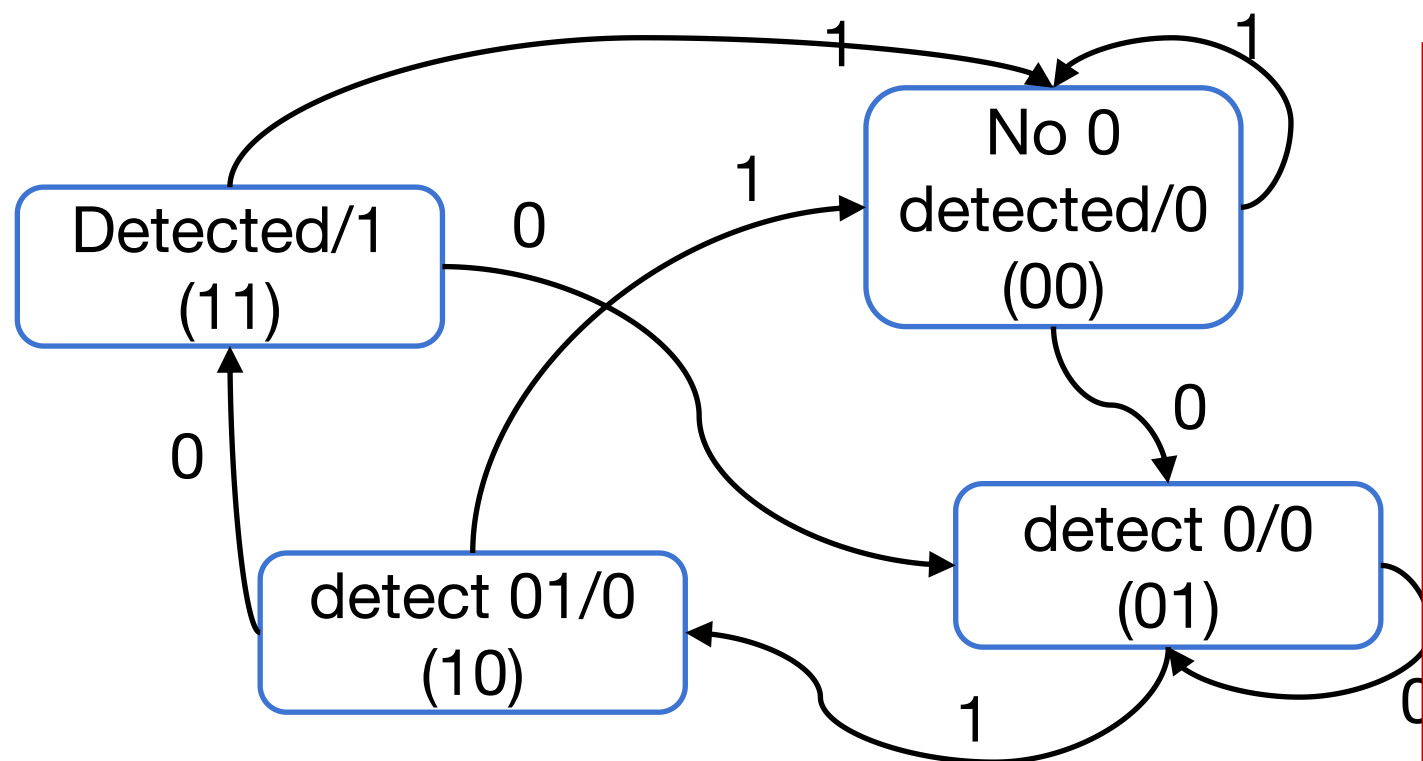

Previous state Current state

input	$S[1]_{k-1}$	$S[0]_{k-1}$	$S[1]_k$	$S[0]_k$	output
0	0	0	0	1	0
0	0	1	0	1	0
0	1	0	1	1	1
0	1	1	0	1	0
1	0	0	0	0	0
1	0	1	1	0	0
1	1	0	0	0	0
1	1	1	0	0	0

Warm-up

- Step 4: Use template and decide the combinational block for state transition and output logic

Previous state			Current state		
input	S[1] k-1	S[0] k-1	S[1] k	S[0] k	output
0	0	0	0	1	0
0	0	1	0	1	0
0	1	0	1	1	1
0	1	1	0	1	0
1	0	0	0	0	0
1	0	1	1	0	0
1	1	0	0	0	0
1	1	1	0	0	0

Warm-up

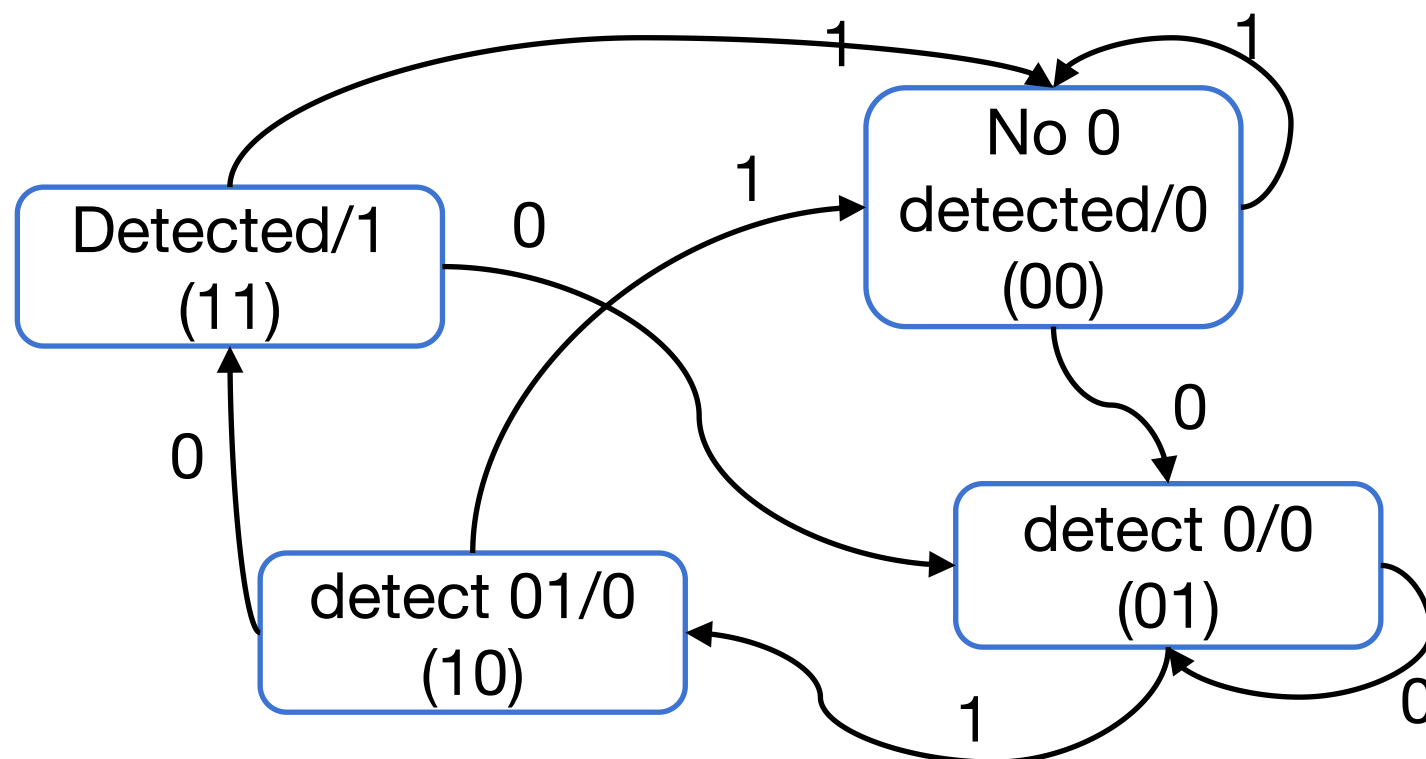

$$\text{output} = S[1]_k S[0]_k$$

$$S[1]_k = \overline{S[1]_{k-1}} S[0]_{k-1} \text{input} + S[1]_{k-1} \overline{S[0]_{k-1}} \text{input}$$

$$S[0]_k = \overline{\text{input}}$$

- Step 4: Use template and decide the combinational block for state transition and output logic

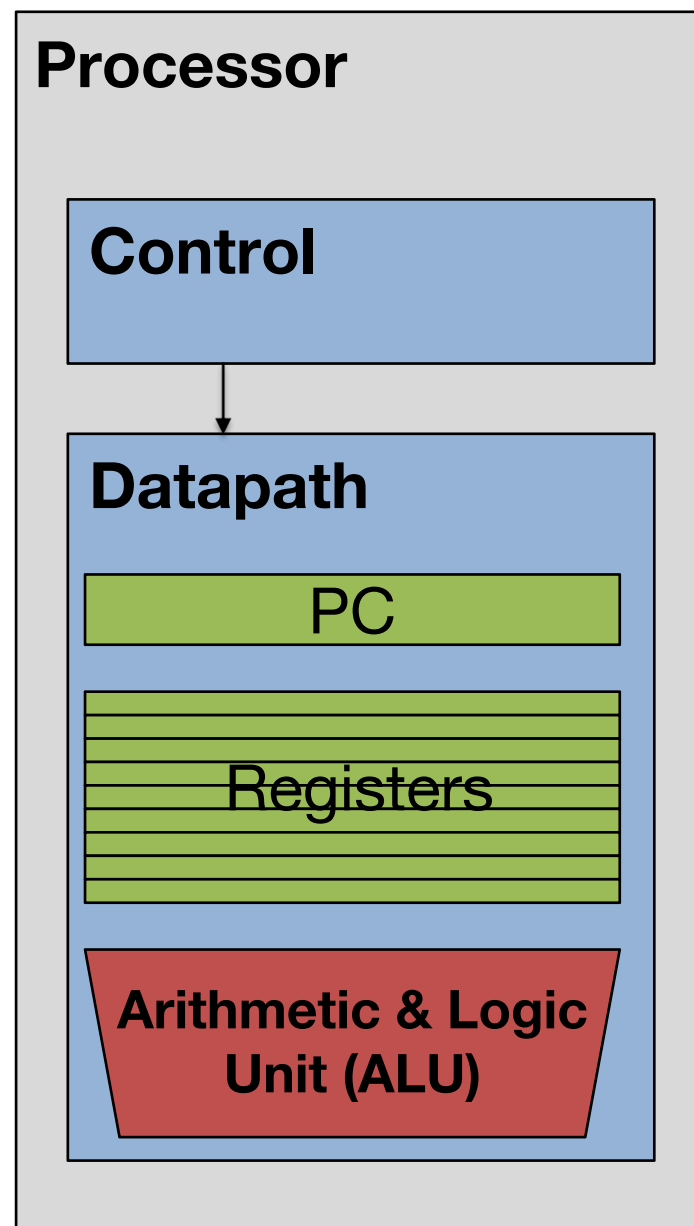

Previous state Current state

input	$S[1]_{k-1}$	$S[0]_{k-1}$	$S[1]_k$	$S[0]_k$	output
0	0	0	0	1	0
0	0	1	0	1	0
0	1	0	1	1	1
0	1	1	0	1	0
1	0	0	0	0	0
1	0	1	1	0	0
1	1	0	0	0	0
1	1	1	0	0	0

Controller & Datapath

- A CPU that support RV32I can have so many states

- Consider the 32 registers alone
 - x0 always 0
 - Each bit in the other registers can be 0 or 1
- Not practical to enumerate all the state transitions
- Top-down design: build small modules and then connect them as needed
- Most digital systems can be divided into datapath and controller
 - Datapath contains data processing and storage
 - Controller controls data access (still can be modeled as FSM)
- Recall the execution of an instruction

- Our Goal: Implement a RISC-V processor as a synchronous digital system (SDS).
- Each RV32I instruction can be done within 1 clock cycle (single-cycle CPU).

Controller & Datapath

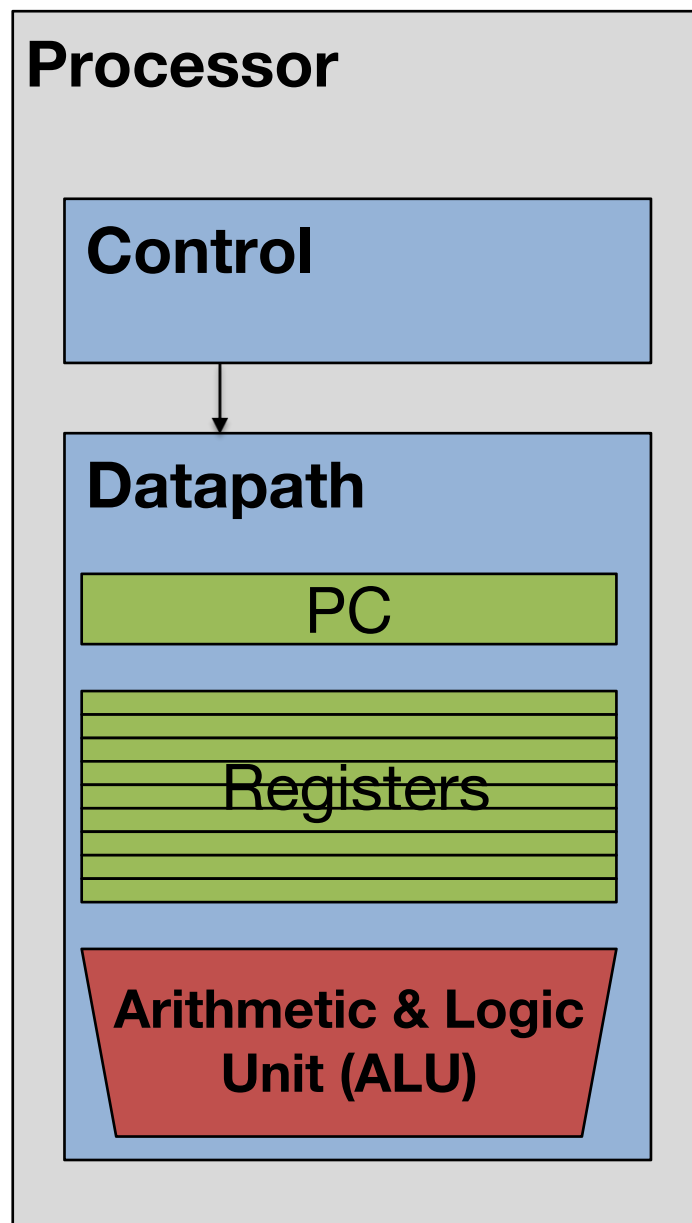

- A CPU that support RV32I can have so many states

- Datapath
 - Start with basic building blocks
 - Add building blocks to the digital system with added supported instructions
 - Controller
 - Can be considered as an FSM
- Our Goal: Implement a RISC-V processor as a synchronous digital system (SDS).
 - Each RV32I instruction can be done within 1 clock cycle (single-cycle CPU).

Useful building blocks

- An ALU should be able to execute all the arithmetic and logic operations

ADD

SUB

SLL

SLT

SLTU

XOR

SRL

SRA

OR

AND

ADDI

SLTI

SLTIU

XORI

ORI

ANDI

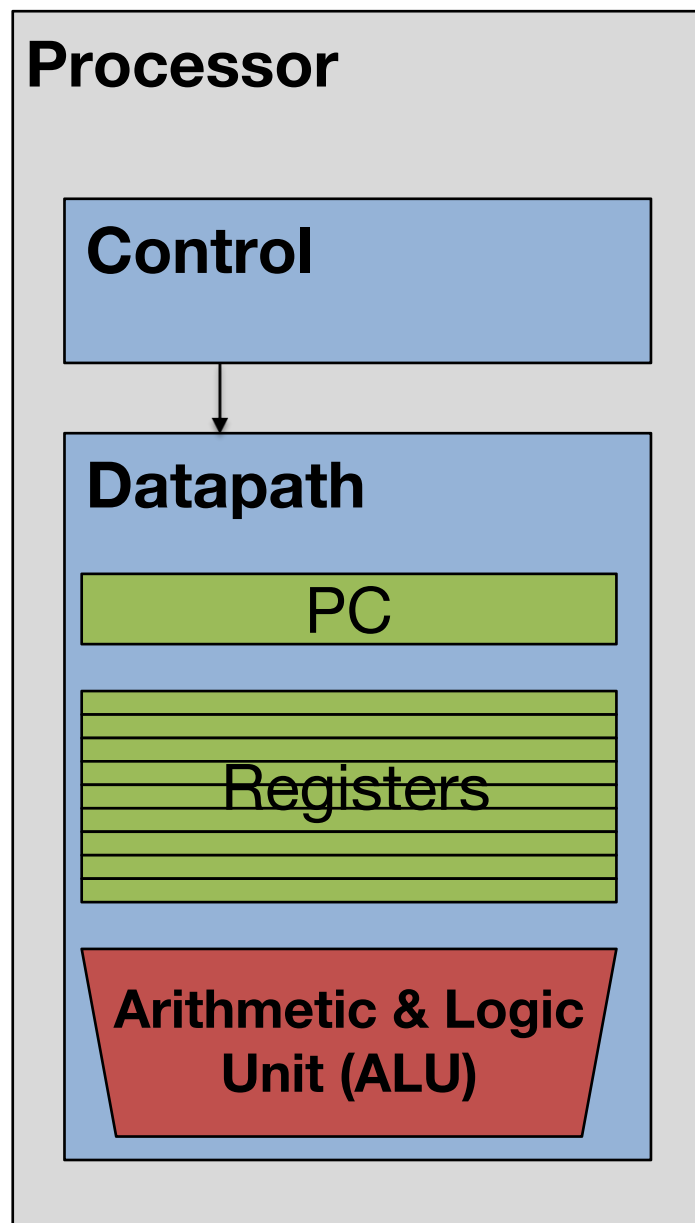

- AND as an example
 - 2 32-bit inputs A and B
 - 1 32-bit output C

- Our Goal: Implement a RISC-V processor as a synchronous digital system.
- Each RV32I instruction can be done within 1 clock cycle.

Useful building blocks

- An ALU should be able to execute all the arithmetic and logic operations

ORI

ANDI

- AND as an example
 - 2 32-bit inputs A and B
 - 1 32-bit output C

A simplified AND
gate array symbol

OR

XOR

- Our Goal: Implement a RISC-V processor as a synchronous digital system.
- Each RV32I instruction can be done within 1 clock cycle.

Useful Combinational Circuits

- Multiplexer (2-to-1)

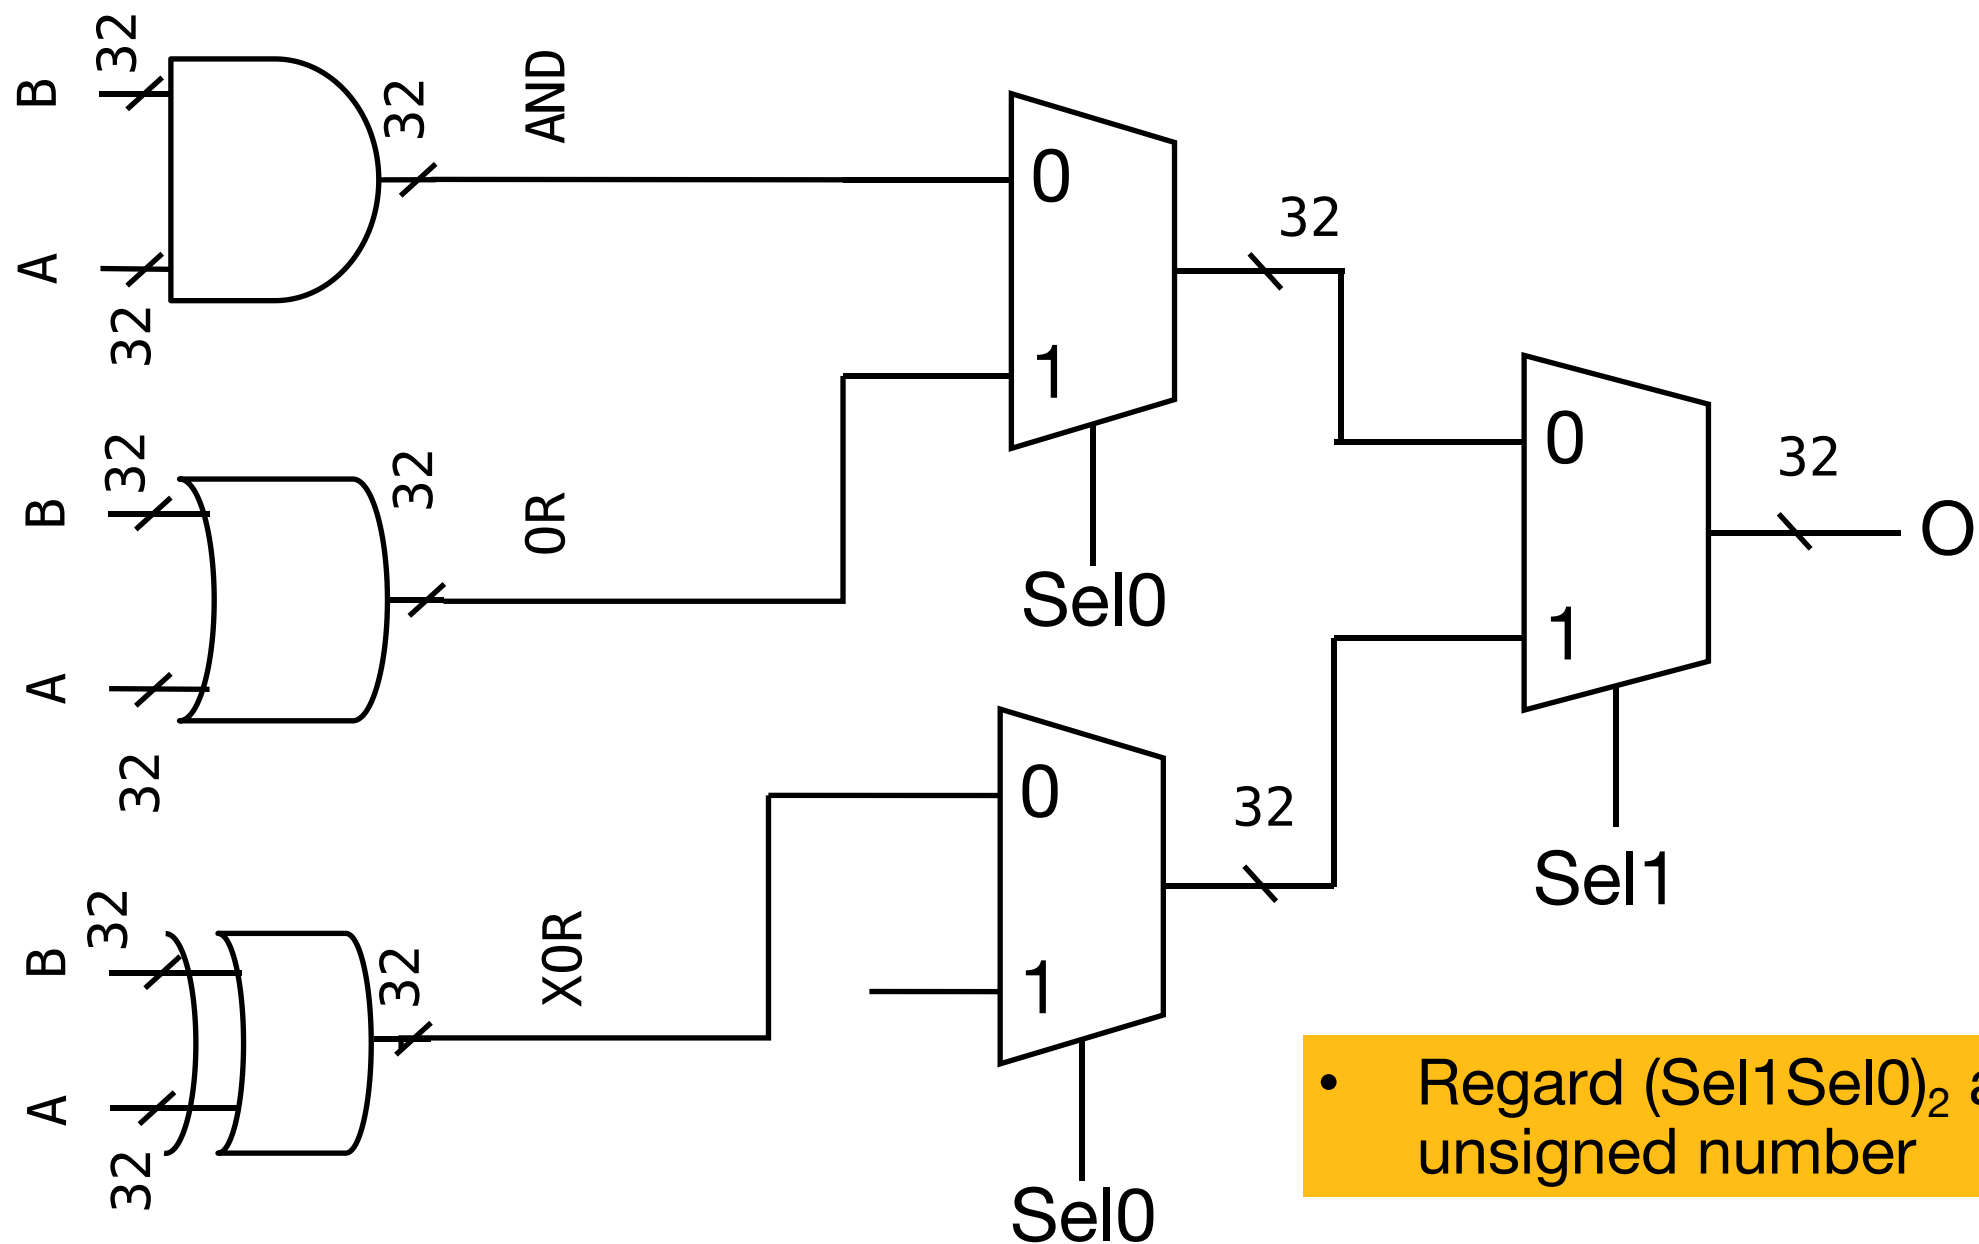

- Multiplexer (2^n -to-1)

Control through selection

- 32-bit Multiplexer and logic gates to support some logic instructions

- More layers of multiplexer to select from more inputs

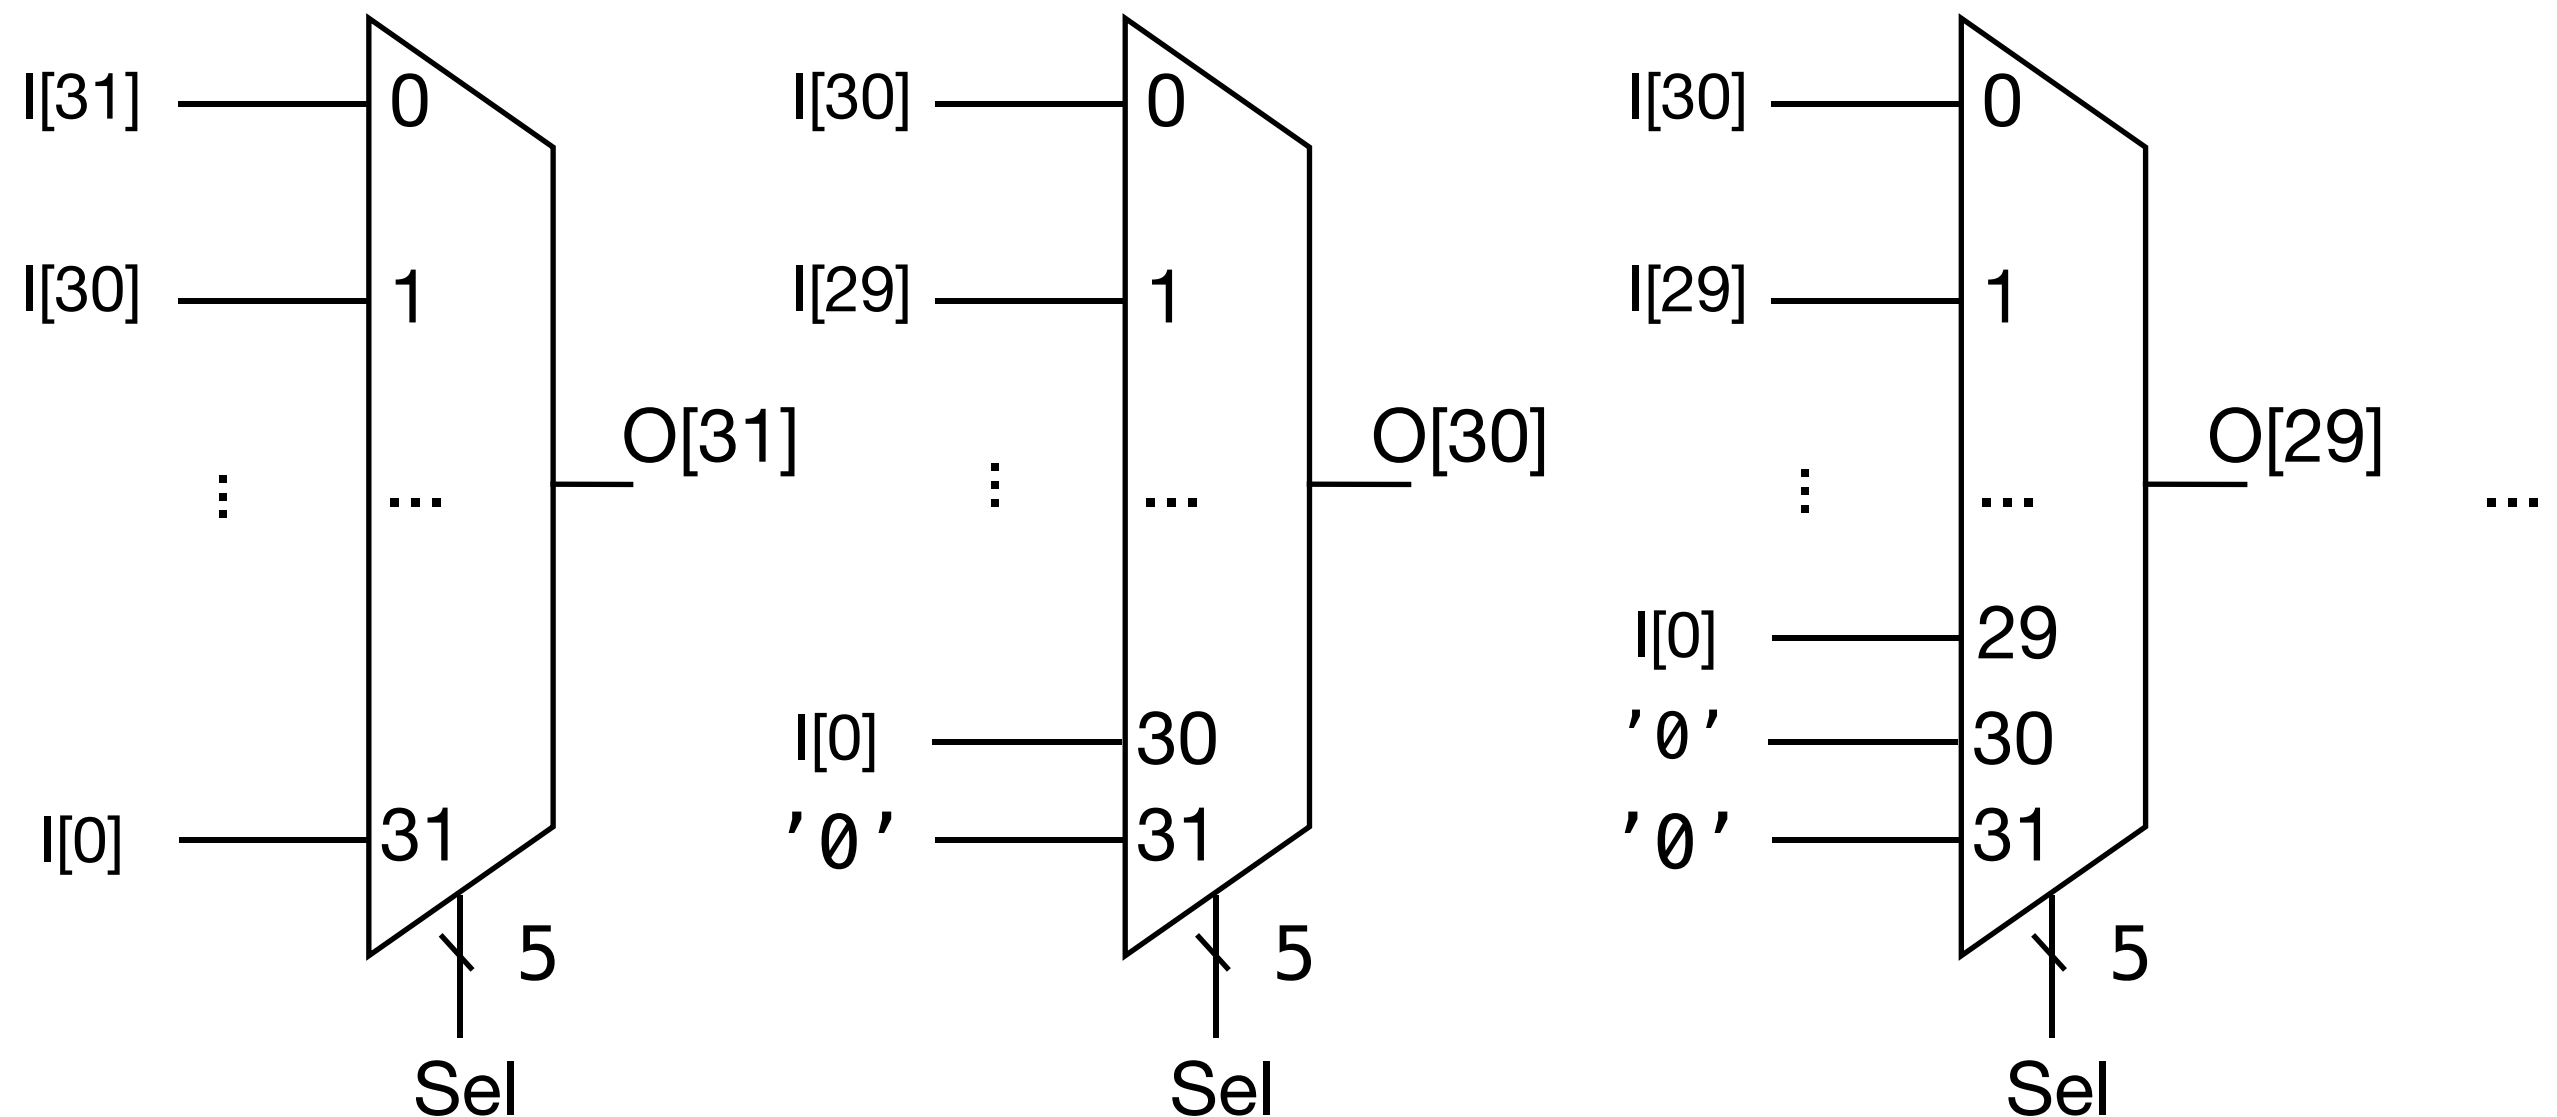

Multiplexer

- N-to-1 multiplexer symbol

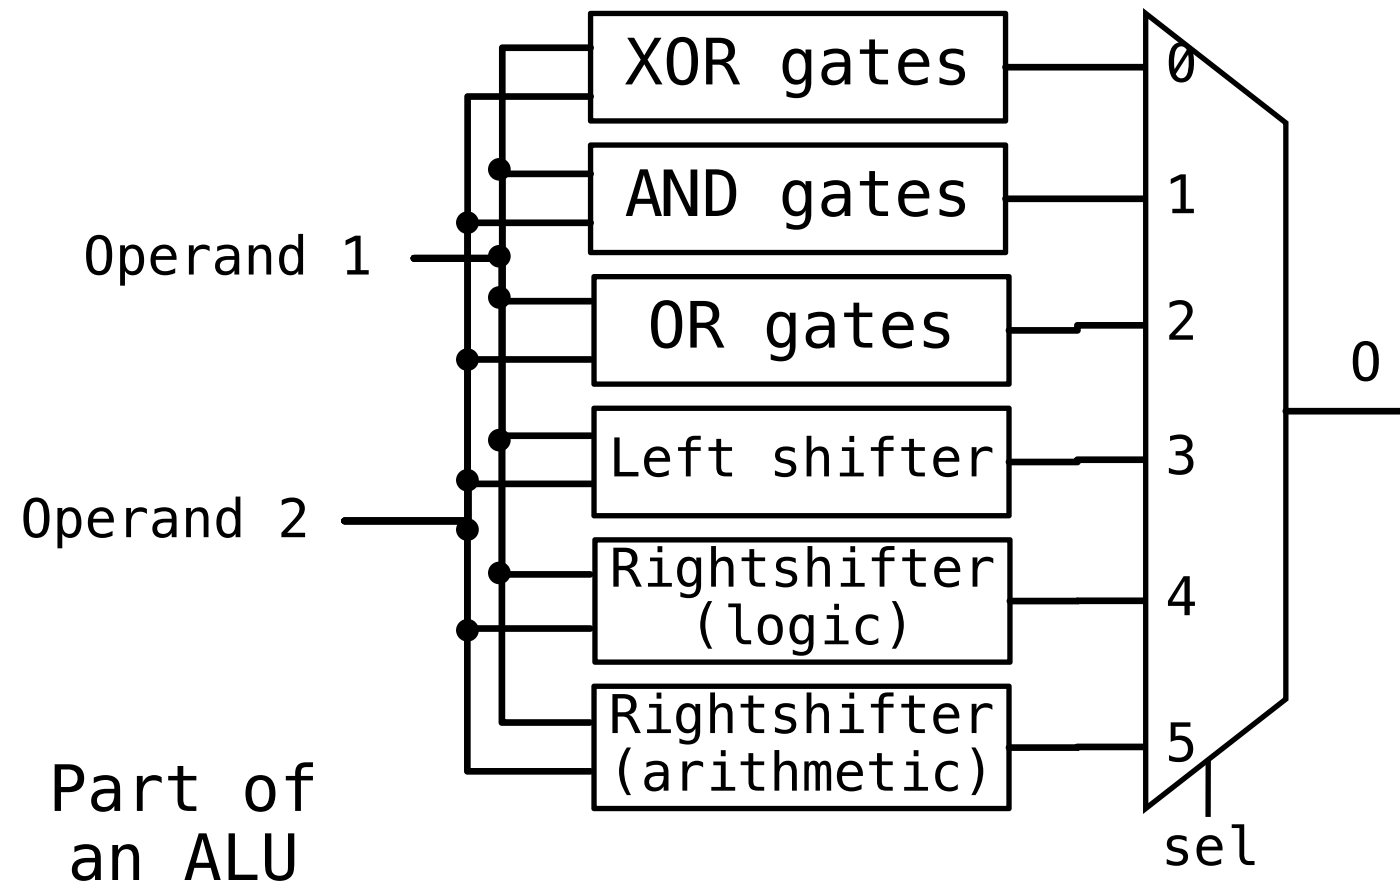

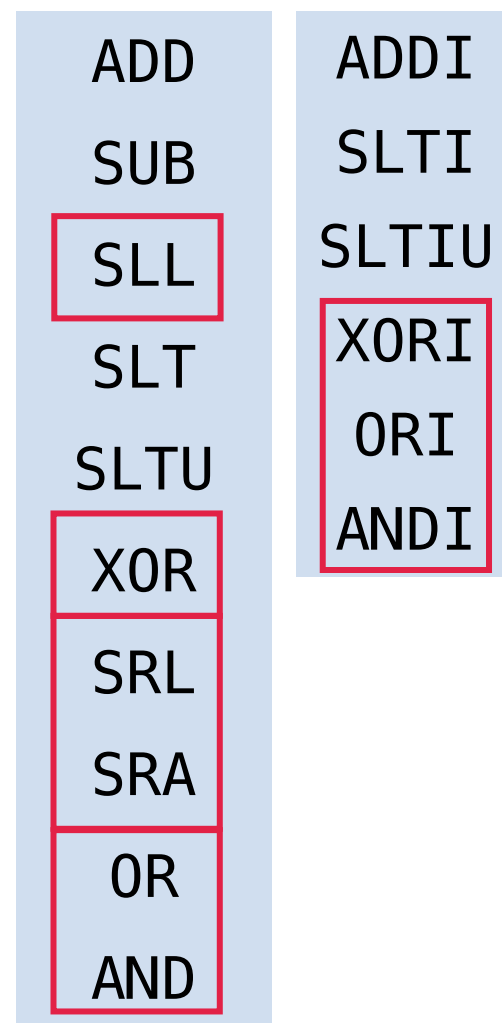

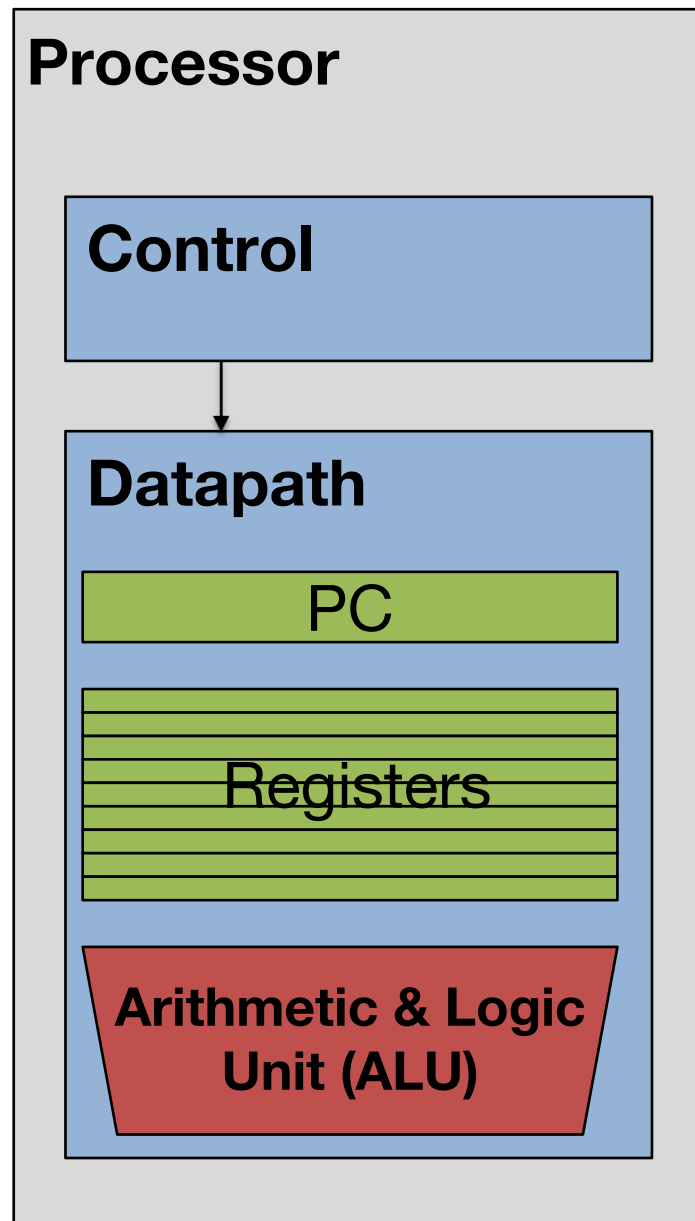

Multiplexers used for shifter

- Left shift a single bit -> left shift multiple single bits
- Other shifter designs such as barrel shifter

Useful building blocks

- An ALU should be able to execute all the arithmetic and logic operations

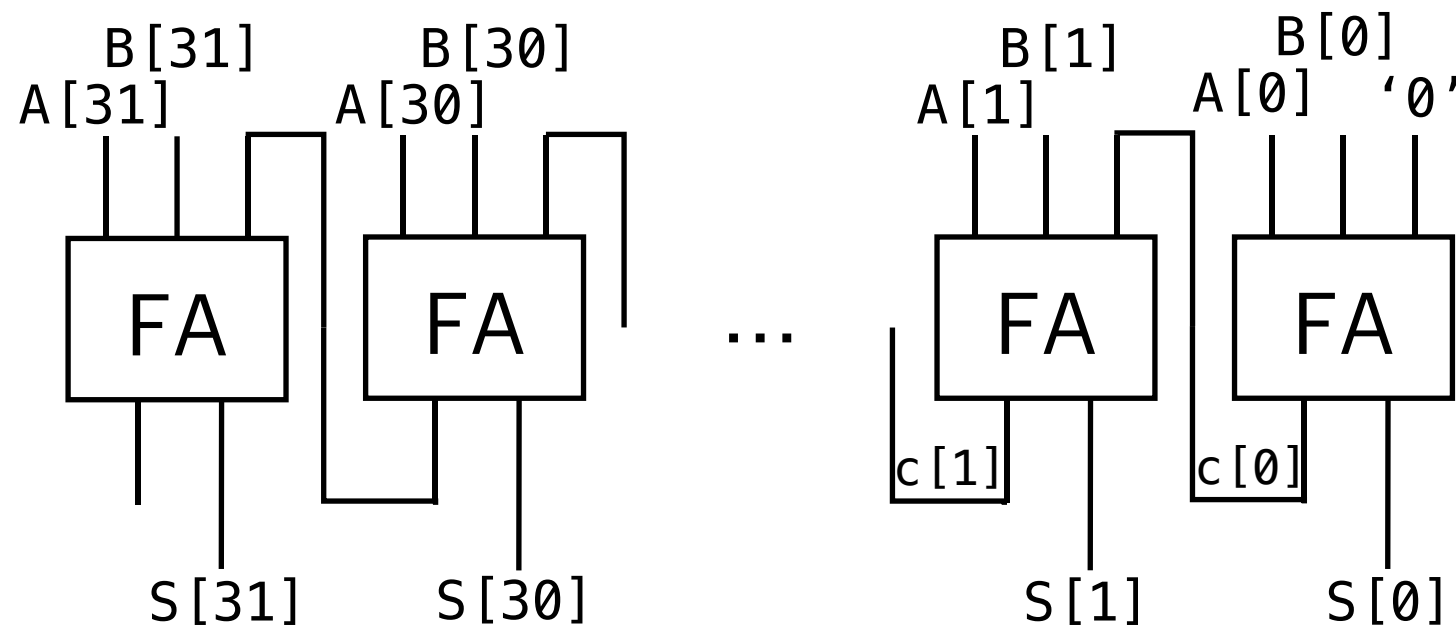

Note that all the signals expect the selection signals are 32-bit.

- Our Goal: Implement a RISC-V processor as a synchronous digital system.
- Each RV32I instruction can be done within 1 clock cycle.

Adder & subtractor

- An adder design

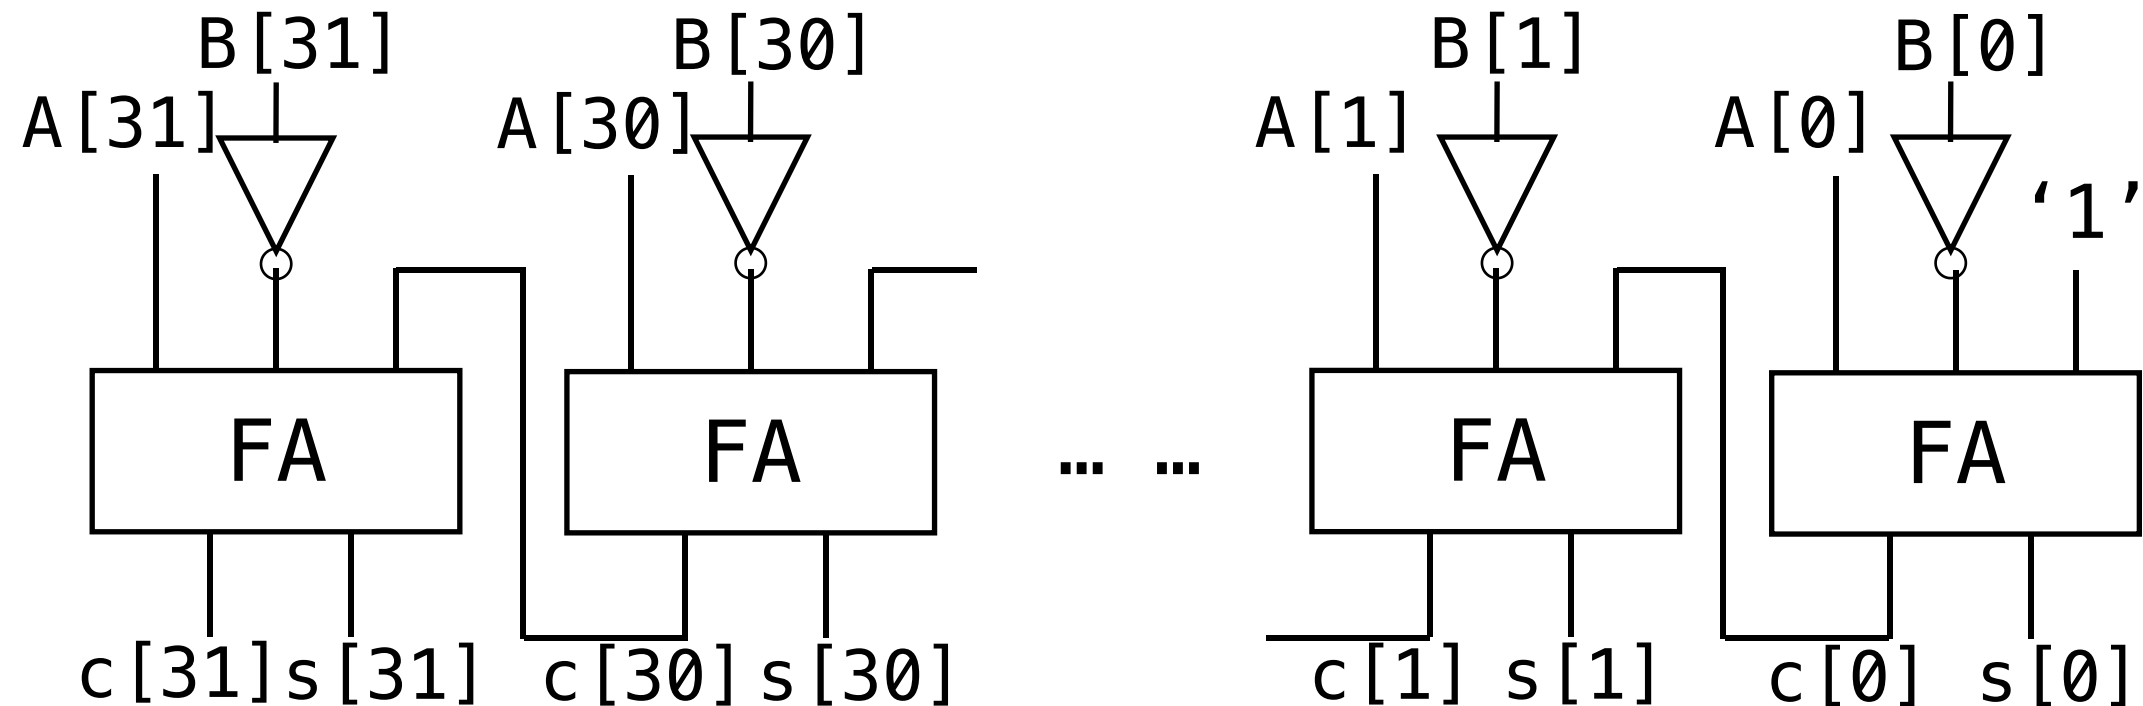

A 32-bit adder

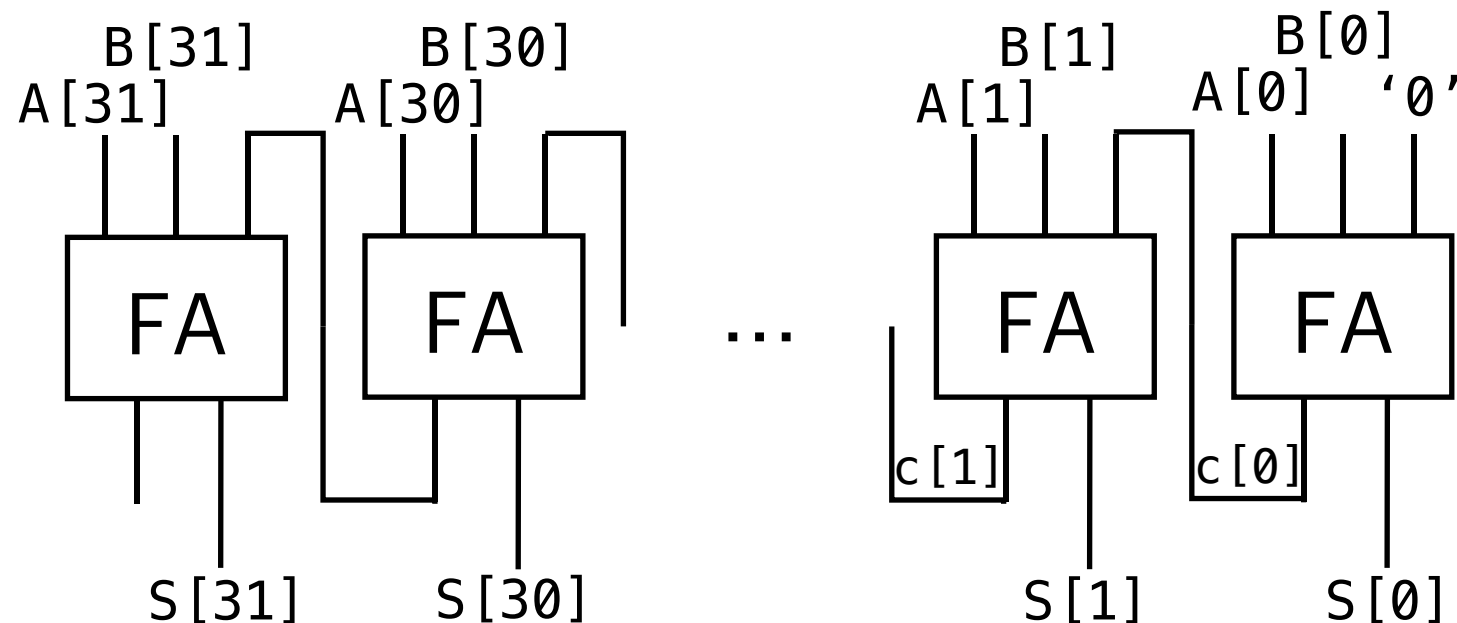

- A smart subtractor design
 - Recall that subtracting a number is equivalent to adding its negative version

A smart subtractor design

$$A - B = A + (-B) = A + \bar{B} + 1 \pmod{2^{N-1}}$$

A 32-bit subtractor

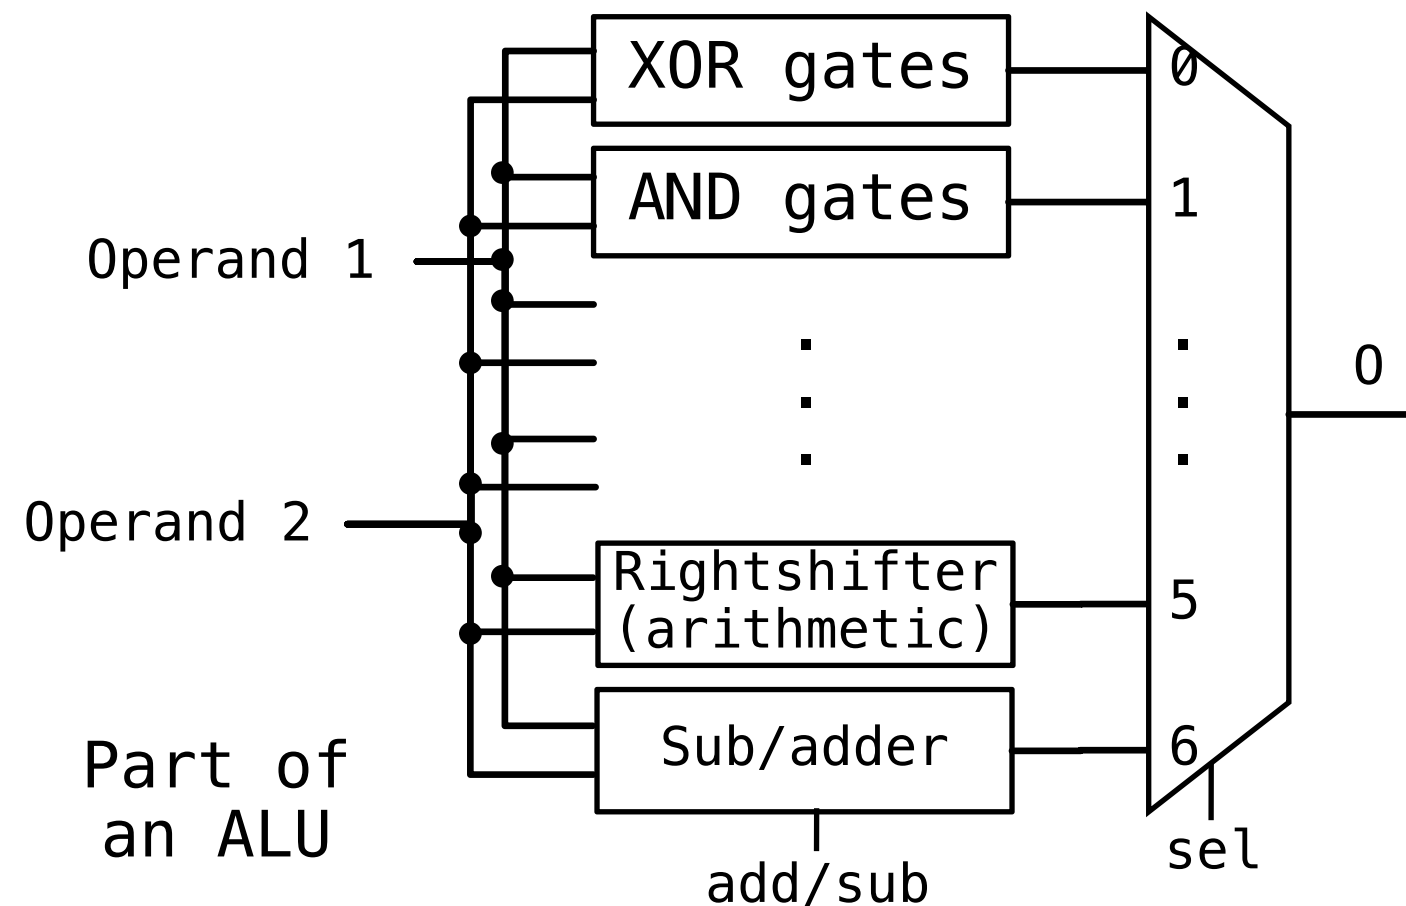

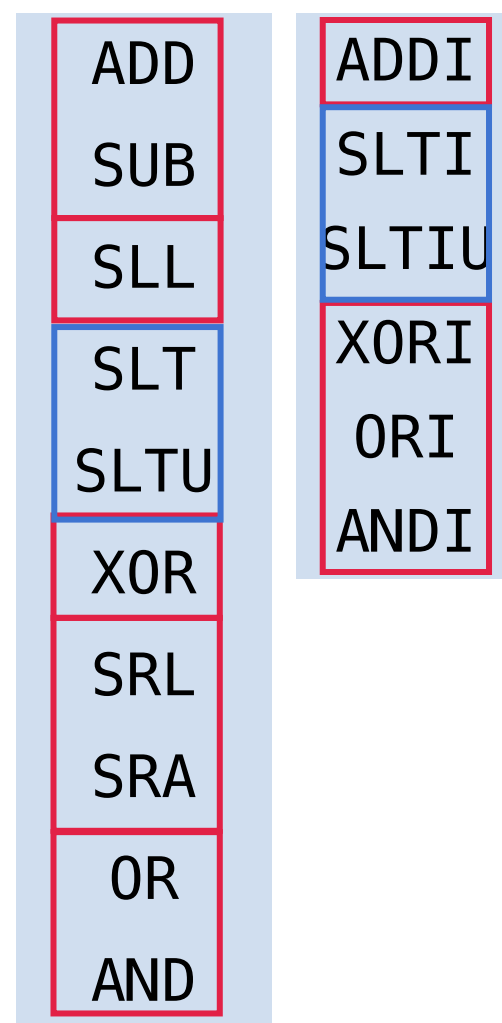

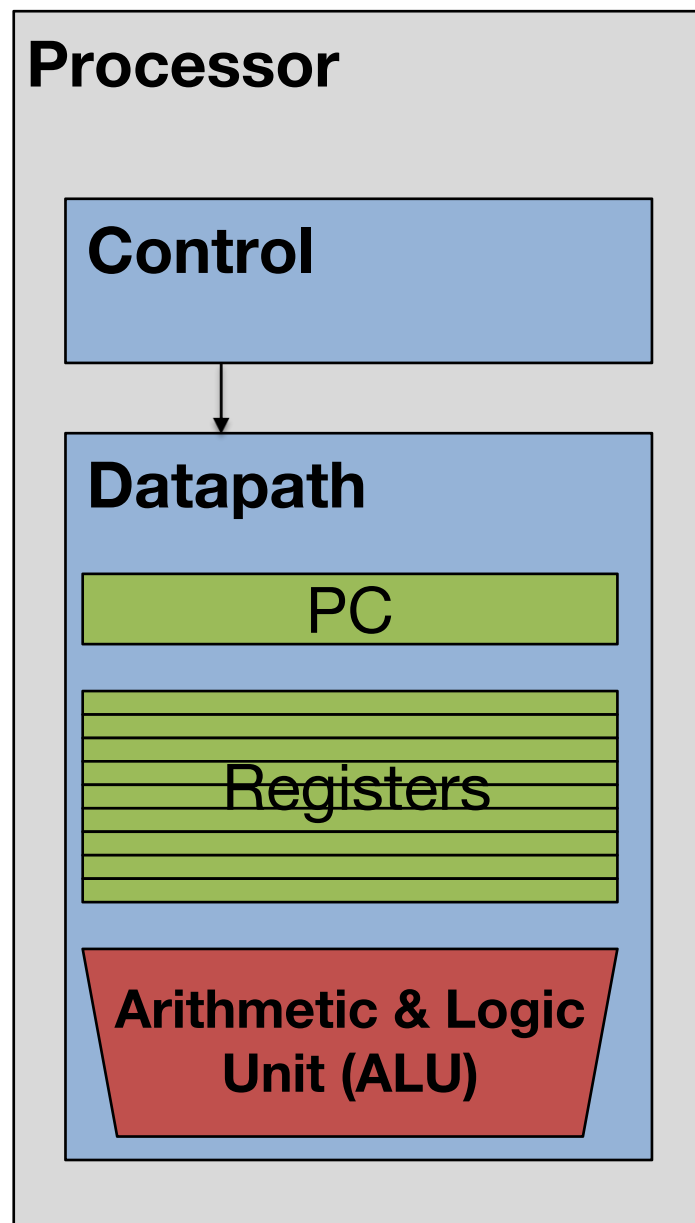

A 32-bit adder

- Recall XOR gate

Useful building blocks

- An ALU should be able to execute all the arithmetic and logic operations

Note that all the signals expect the selection signals are 32-bit.

- ALU design that supports R-/I-arithmetic and logic operations completed

Useful building blocks-Register file

- The register file is the component that contains all the general purpose registers of the microprocessor
- A register file should provide data given the register numbers
- A register file should be able to change the stored value

- Recall we have registers that store values

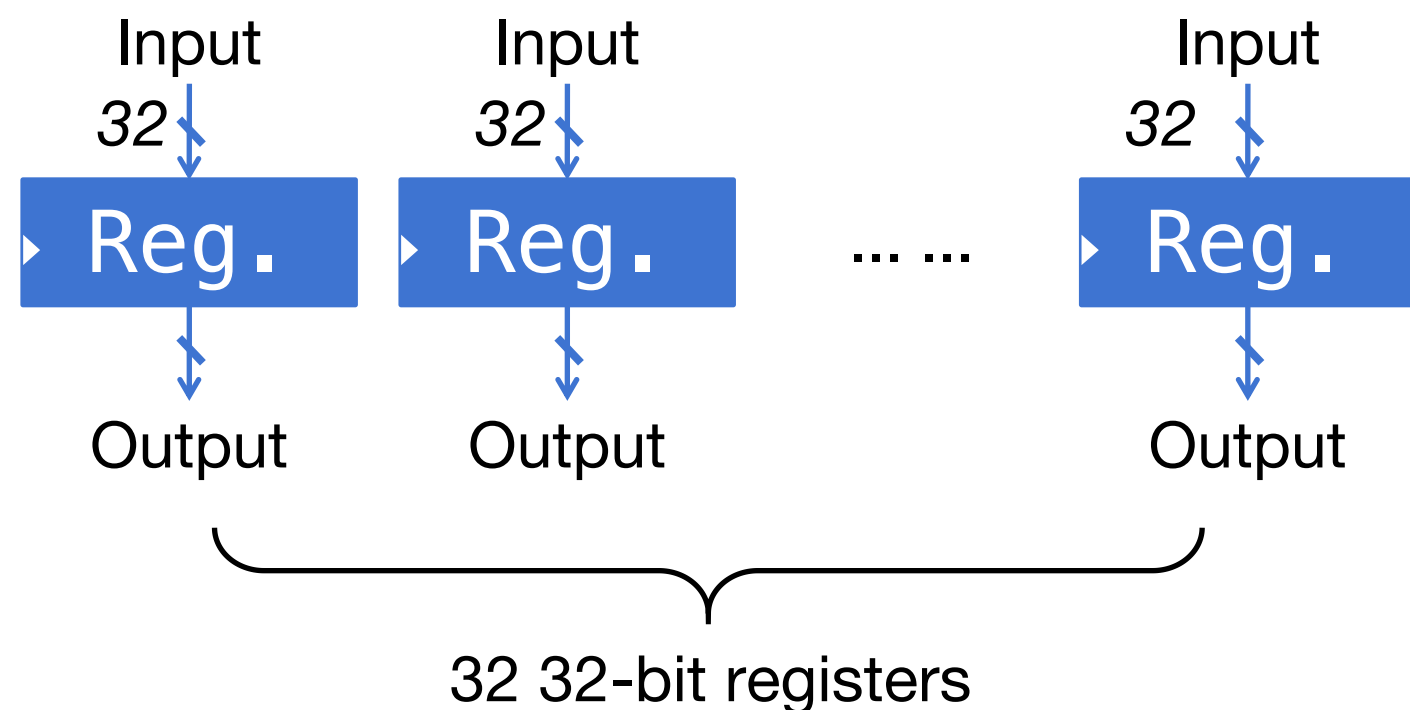

Useful building blocks-Register file

- The register file is the component that contains all the general purpose registers of the microprocessor
- A register file should provide data given the register numbers
- A register file should be able to change the stored value

- Recall we have registers that store values

- How to select one to output? **Multiplexer**

Useful building blocks-Register file

- The register file is the component that contains all the general purpose registers of the microprocessor
- A register file should provide data given the register numbers
- A register file should be able to change the stored value

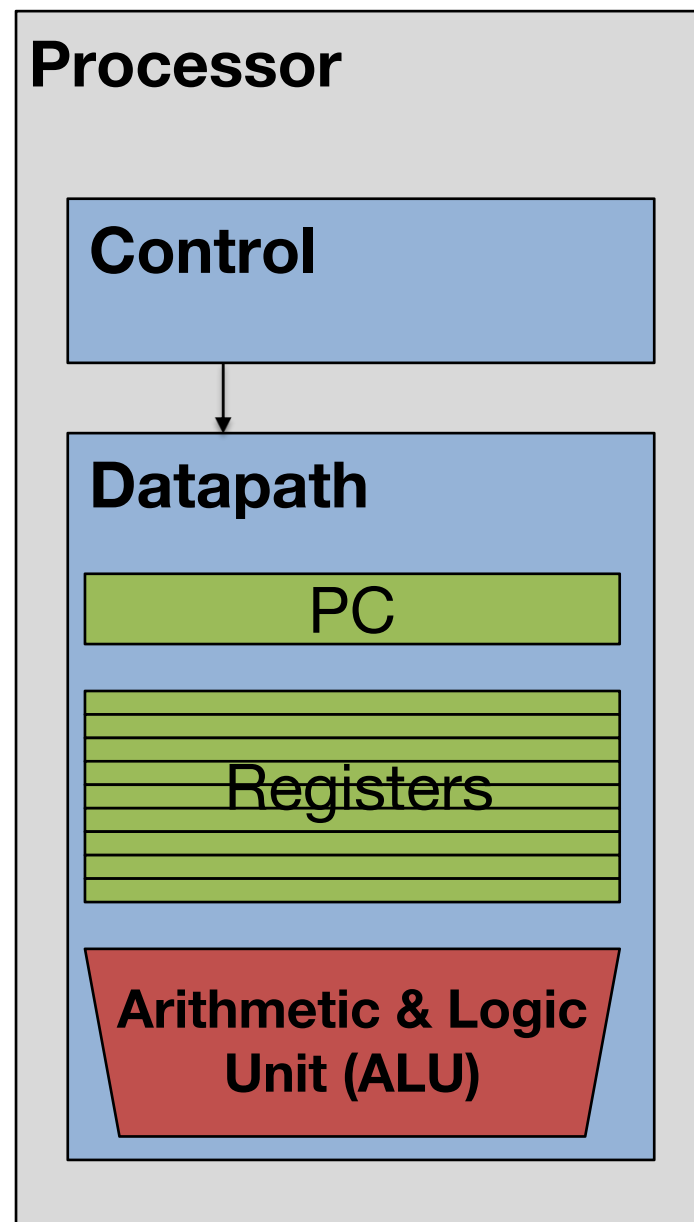

- Recall we have registers that store values

Useful building blocks-Register file

- The register file is the component that contains all the general purpose registers of the microprocessor
- A register file should provide data given the register numbers
- A register file should be able to change the stored value

- How do we change values of a specific reg.?
- Recall that `clk` is used to control the change of the state

Useful building blocks-Register file

- The register file is the component that contains all the general purpose registers of the microprocessor
- A register file should provide data given the register numbers
- A register file should be able to change the stored value

- How do we change values of a specific reg.?

- Reg. file design completed

We have covered PC register previously

- Synchronous digital circuit can have feedback, e.g., iterative accumulator
 - e.g. $PC = PC + 4$ without considering branch or jump

- Timing diagram

Useful building blocks-Memory

- Memory similar to register file except that the basic cell design is different
- Requires refresh for DRAM
